

Expository/Informational Writing Across-the-Curriculum

THIRD EDITION

Teacher's Guide

GRADES 6-12

Expository/Informational Writing Across-the-Curriculum

TEACHER'S GUIDE

COPYRIGHT © 1991-2024. Louis Educational Concepts, LLC and Deborah E. Louis. All rights reserved.

This reproducible teacher guide is for single-classroom use only by the individual purchaser with his or her students. When forms, graphic organizers, and sample documents are included, their use in the brick-and-mortar classroom setting is authorized only by teachers who have purchased this guide. Except for that usage, no part of this book may be reproduced, utilized, or posted online in any form or by any means, electronic or mechanical, including photocopying, recording, or by any information storage and retrieval system, without permission in writing from the publisher. Workshop and webinar participants may not present these materials or instructional strategies at any meeting, workshop, or in-service in any school, district, or other gathering. No school or district may establish any local trainers who are not certified by Louis Educational Concepts, LLC. Attending a workshop or in-service does not constitute certification.

To the memory of Jane C. Schaffer.

Her wit and wisdom continue to inspire us to provide new and innovative strategies to the teachers and students of the 21st century.

Acknowledgements

I would like to give a special thank you to Louis Educational Concepts' team of trainers and staff for their time and contributions to the third edition of the Expository/Informational Writing Across-the-Curriculum Guide. The trainers listened closely to workshop participants' questions and points of clarification, which guided many of our decisions. The trainers and staff spent many hours taking that information and revising and creating the guide into a guide, we believe, will be helpful to all teachers whose students write.

I would also like to acknowledge all the educators who embrace the Jane Schaffer Academic Writing Program's philosophy that all students can think and all students can write. Thank you for your time and devotion to supporting our future thinkers and writers.

Foreword

Educational research recognizes that teacher actions are a key factor in student achievement and highly skilled teachers accomplish higher levels of student achievement. Highly skilled teachers incorporate explicit and systematic instruction, develop student accuracy in all learning components, foster mastery within student learning, provide student opportunities for over learning leading to student automaticity, and provide specific feedback and reinforcement to students. The Jane Schaffer Writing Program® design and training incorporates those key strategies into its instructional framework, thus creating the opportunity for teachers to become highly skilled and for students to experience success in their academic writing.

Most importantly, the JSWP framework provides students the opportunity to develop and perform complex thinking skills. Mastered literacy skills coupled with proficient writing skills are essential for student higher order thinking and the generation of new learning. When implemented with fidelity and students perform with automaticity, the JSWP framework provides the structure for them to attain higher order, complex thinking skills.

David Dorn, Leadership and Program Coordinator

Introduction

Overview

Jane Schaffer earned her degree in French and English at UCLA in 1968 and her secondary teaching credential from San Diego State College in 1969 and started teaching English, French, and Latin later that year. Since then, her quest has always been to find a way to teach all students how to write. She developed her writing program for students at all levels from special education and English Language Learners (ELL) through honors, Pre-AP®, and Advanced Placement® (AP®).

She taught at Santana High School in Santee, California for eighteen years. In 1987, she and a colleague helped to open West Hills High School in Santee, a new school in the same district.

They had the opportunity to teach paragraph and essay writing to freshmen rather than to juniors and seniors as had been done at her previous school. The program led their students at all grade levels to the #1 spot (of ten comprehensive high schools) on the annual district writing assessment, a place held for many years.

The inspiration for this guide springs from Schaffer's own experiences as a student in school. Like many teachers, she didn't learn how to write in high school and did poorly as a college freshman. Her college professors made comments such as "It's obvious you can't write." She met many teachers who were treated similarly. To borrow from William Faulkner, they all not only endured; they prevailed.

Ever since, we wanted to spare our students the same embarrassment and humiliation that we felt when our essays earned Ds and Fs. The goal of this guide is to demystify the blank page and enable every student to master the elements of composition. Students often think that writing is a mystery, and only the teacher has the solution. It isn't a secret; it's just hard work. Teaching writing is teaching thinking. Our goal is to break the process into digestible steps that all students can follow.

Over the years, we have conducted many workshops in many states and countries to share our writing program, and we continue to do so. In 1984, we started offering workshops in Advanced Placement Literature and Composition in San Diego and have branched out since then to include Program Improvement districts, schools with 900 API, and grades ranging from kindergarten to college. Currently, we employ national trainers who conduct our workshops.

In all our workshops and in this guide, we strive to give the *why* as well as the *how*. This guide represents two days of expository training.

The Early Years

As young teachers in the early 1970s, we adopted a structured approach to writing because we were desperate. Our students' writing was chaotic. It had no sense of beginning, middle, or end, with no order to the thoughts and no higher-order thinking at all. It was filled with what we call *concrete detail* — *who, what, when, where*, but no *how* or *why*. Students simply grabbed sentences out of the air and wrote just enough to fill the page.

For several years, we used the ideas in *Power Writing* by J. E. Sparks, professor at the University of Southern California. He developed a numbered paragraph structure guided by a main idea supported with details. We liked the increased organization in students' writing but thought the paragraphs were missing something. They lacked a "so what?" That "so what?" turned out to be a concept called *commentary*.

How Commentary Began

The missing piece, the "so what?", was born one day during a one-to-one conference with a gifted junior. He was writing an essay in 1975 about how Lake Erie had changed since he had been a young boy living there. He brought his prewriting to the teacher at her desk. The teacher looked over the list of concrete details and told the boy to analyze his examples - pollution, dead fish, oil slicks on the beach, the fire when the Cuyahoga River burned. The teacher said, "These look good - now go analyze them."

The boy said, "I have no idea what you teachers mean by *analyze*." This was a reasonable statement; he wanted to do the assignment but didn't know how to begin or what it should look like when he was finished. Then the teacher asked him to say how the experience had changed or affected him. He thought for a few seconds and said, "I realized my past was lost. The cherished days of my childhood were ruined. The halcyon days were behind me." The boy really said "halcyon." Schaffer was speechless that a student knew the word and used it correctly.

The teacher said, "You did it - what you said to me was analysis. And we're going to call it *commentary* because you *commented* to me about your details." It's a far more user-friendly word for teenagers than *analysis* and *interpretation*. That day began a department conversation about what it means to analyze a topic and how to lead teenagers away from plot summary - the bane of English teachers' existence - and toward deeper thought. Most teachers don't remember how they learned to write. They often taught themselves and alone made the leap from plot summary to analysis. Some know a certain person who helped them, but most of us have no memory of the moment. We just did it.

That student's reaction made us realize two points:

1. Talking is the missing link in thinking. Students can say what they are thinking but need help getting it down on paper.
2. We assumed far too much about both content and mechanics, and that has rung true ever since. We thought students knew about topic sentences and indentations and analysis, but we were wrong on every count. We like to think we've made unwarranted assumptions less frequently since then.

Where is the Jane Schaffer Writing Program Headed Now?

Since its inception, it has moved across the curriculum to include content-area paragraphs and essays and toward other genres more common to the English curriculum, such as expository, narrative, and argumentation. In student teaching, people still don't always receive instruction in ways to teach writing, so this guide continues to fill that gap. Based on the feedback we receive from our students, from other schools, from our graduates in college, and from our students in the world of work, we know we are achieving our goal. The following reveal just a few of hundreds of testimonials:

The Jane Schaffer writing program has made such a difference in my students writing. Before Jane Schaffer I would teach my students the parts of a paragraph and explain to them that they had to include details about their topic. When students were unable to provide concrete details about a topic, I wasn't sure how to tell them what they were missing. With Jane Schaffer, I am now able to pinpoint exactly what they need to include. It's as simple as, "You're missing a concrete detail about the topic." Or "You've provided wonderful concrete details, now use a commentary to tell me what you think about those concrete details." Writing paragraphs has become such a seamless task for my students thanks to the Jane Schaffer program.

– Marycruz Perez, Second Grade Teacher

"Students learn to expand and connect their ideas to larger or more thematic ideas. [The program] helps young writers or inexperienced writers to understand the basic approach to good writing; then it goes on to help students develop college-level essays. As an AP reader, I have seen how the structure is present in a high scoring essay. As an Advanced Placement Consultant for the College Board, I share these ideas and show students and teachers how it works in successful AP essays."

– Ms. Kaatz, Advanced Placement English Teacher

On Sunday, August 22, 2010, when schools all over the nation and the world were preparing for the first day of school, we lost Jane Schaffer after her courageous battle against cancer. She was 65 years old. She left a family who loved her and teachers who remember her sense of humor and direction toward empowering us with the tools to teach writing to their students. Every August she reminds us that all students can think, and all students can write. The program continues to evolve, based on questions and suggestions from workshops, working with students team meetings, and our own writing. It will always be process-driven but product-oriented.

Notes

All Students Can Think; All Students Can Write.

An Overview of the Gradual Release Model

The Gradual Release Model, or guided instruction teaching strategy, implemented throughout the Jane Schaffer Writing Program, ensures that students are supported in their acquisition of the skills and strategies necessary for successful writing. Implementing the gradual release of responsibility model requires time and careful instructional planning to ensure student success in independent writing.

The goal of guided instruction in the gradual release of responsibility model is to guide students toward using different skills, strategies, and procedures independently. Hence the student will continually assume more responsibility with less support from the teacher. Lessons are created to ensure student success.

Stages in the Gradual Release Model

Stage 1: Modeling – “I do it.”

The teacher establishes the purpose of the lesson and models her or his thinking. The purpose should be based on the expected learning outcomes, such as standards, and be clearly communicated to students. Teacher modeling should provide students with examples of the thinking and language required to be successful.

<u>THE TEACHER</u>	<u>THE STUDENTS</u>
• Provides direct instruction • Establishes goals and purpose • Models desired outcomes • Utilizes the “Think Aloud” teaching strategy	• Actively listen • Take notes • Ask for clarification

Stage 2: Guided Instruction – “We do it.”

The teacher strategically presents questions, prompts, and cues to facilitate student understanding. This can be done with whole groups of students but is probably more effective with small groups that are convened based on instructional needs. During guided instruction, the teacher focuses on releasing responsibility to students while providing instructional scaffolds to ensure that students are successful.

<u>THE TEACHER</u>	<u>THE STUDENTS</u>
• Creates interactive instruction • Works with students • Checks, prompts, clues • Provides additional modeling • Meets with needs-based groups • Asks and responds to questions	• Work with teacher and classmates • Complete the process alongside others

Stage 3: Paired Work – “You do it together.”

Students work in collaborative pairs to produce a product related to the topic at hand. To be productive, the collaboration must involve students using academic language and being individually accountable for their contribution to the effort. This phase of instruction should provide students with an opportunity to consolidate their understanding before they apply it independently.

<u>THE TEACHER</u>	<u>THE STUDENTS</u>
• Moves among the pairs • Clarifies areas of confusion • Provides support	• Work in pairs • Collaborate on the authentic task • Consolidate learning • Complete process in the paired group • Look to peers for clarification.

Stage 4: Independent Work – “You do it alone.”

Students apply what they have learned in class and outside of class. Many independent learning tasks are used as formative assessments, designed to check for understanding and to identify needs for reteaching. Of course, independent learning tasks should not come too soon in the instructional cycle since students need practice before they can sufficiently apply knowledge in new situations.

<u>THE TEACHER</u>	<u>THE STUDENTS</u>
• Evaluates student work • Determines level of understanding • Provides feedback • Intervenes as appropriate	• Work independently • Rely on notes, activities, and classroom models to complete the assignment • Take full responsibility for the outcome

“I was particularly impressed by the sequencing of modeled writing, class writing, partner writing, and eventual independence, and the many tricks you provided to help students as they progress from one level to the next!”

– Ms. Hieber, Instructional Coach, English Language Arts and Reading

JANE SCHAFFER'S NON-NEGOTIABLES

Philosophical Points

- NN#1. All students can think, and all students can write.
- NN#2. Formula/structure is a place to start for students who need it; some don't need it at all. We want students to leave the formula behind when they are ready to do so. Breaking the formula is called *weaving* – mixing fact and opinion / concrete detail and commentary.
- NN#3. Consistency of the program outweighs individual teacher preference. Everyone abides by majority vote.
- NN#4. Common terminology for the paragraph and essay helps students learn.
- NN#5. Writing is a process that includes decoding the prompt, reading and annotating one or more texts, completing the JSWP graphic organizers, drafting, editing, revising, and following the guidelines of the rubric. All of these steps are required.
- NN#6. Meeting regularly to talk about student work is critical.

What We Do in Class

- NN#7. We color-code the paragraph and the essay in our presentations (black, blue, red, and green pens).
- NN#8. We use a department-wide scoring guide for all writing assignments.
- NN#9. We see students in one-to-one conferencing as often as possible.
- NN#10. For each student, we have multiyear, cumulative writing folders that we pass on to the next teacher each fall.
- NN#11. We write with each other and with our students (Shared Writing); “We can't teach what we don't do” (Carol Jago).
- NN#12. We follow the Gradual Release of Responsibility Methodology.

Text-Based Writing versus Non-Text Based Writing

Text-Based Writing

Students write to a prompt that refers to one or more selected texts. Traditionally, a **text** is understood to be a piece of written or spoken material in its primary form. However, for our purposes, a text may also be in the form of a movie, podcast, song, painting, or video, to name a few. Text-based writing brings *equity* to students since they are all interacting with the same text. By working with the same text, students have access to the same information presented about a topic and respond to the prompt with evidence from that text to support their assertion.

Non-Text-Based Writing

Students write to a prompt that refers to common information without a text. Prior to a non-text-based writing assignment, teachers want to ensure students come to the assignment with an equitable understanding about the topic; otherwise, this type of writing may seem *inequitable* as all students may not possess the same knowledge. *A suggestion is to assign non-text-based writing as a formative or summative assessment to monitor student comprehension after a lesson or common experience.*

Notes

All Students Can Think; All Students Can Write.

*“Educating the mind without educating the
heart is no education at all.”
Aristotle*

THE GRADUAL RELEASE MODEL WITH JSWP

1.	Modeling “I Do It.”	➤ The Teacher: Provides direct instruction; establishes goals and purpose; models desired outcomes; utilizes the “Think Aloud” teaching strategy* ➤ The Students: Actively listen; take notes, ask questions for clarification ➤ Equipment and Materials: ○ hard graphic organizers and pens for each student and teacher (students copy as teacher presents each step and the thinking behind each step) ○ hard copy of the model from start to finish for students who need assistance ○ dry erase board, interactive whiteboard, document camera, chalkboard ○ if digital, use JSWP Google Docs, JSWP App, Bring Your Own Device (BYOD), laptop ➤ Formative Assessment Suggestions: ○ develops a clear personal model on paper or digitally ○ on-task behavior, focus ○ asking questions, clarification ○ color-coding correctly ○ correct grammar, mechanics, usage *“Think Aloud” ○ Verbalize your thinking—make it visible—as you simultaneously teach a lesson. (Stream-of-Consciousness, information processing) ○ “Think Aloud” through the JSWP process while completing each step with fidelity.
2.	Guided Instruction “We Do It.”	➤ The Teacher: Provides interactive instruction; works with students; checks, prompts, gives clues; provides additional modeling; meets with needs-based groups; asks and responds to questions. ➤ The Students: Interact with teacher and classmates; complete process with and alongside others, provide input to lesson ➤ Equipment and Materials: hard copies or digital graphic organizers; pens ➤ Formative Assessment Suggestions: ○ Everyone offers two comments for each part of the process through the final draft. ○ Proper graphic organizers and colors are used. ○ Group processing after each step in the process: “reflecting on the group’s work to clarify and improve the effectiveness of the members in working together to achieve the group’s goals by (a) describing which member actions were helpful and unhelpful and (b) making decisions about what actions to continue or change” (Johnson, et al.). ○ Everyone submits entire process (after each step).
3.	Paired Work “You Do It Together.”	➤ The Teacher: Moves among pairs; clarifies confusion; provides support ➤ The Students: Work with classmates; collaborate on authentic task; consolidate learning; complete process in pairs; look to peers for clarification ➤ Promotive Interaction Suggestions: “Students promote each other’s learning by helping, sharing, and encouraging efforts to learn. Students explain, discuss, and teach what they know to classmates. Teachers structure the groups so that students sit knee-to-knee and talk through each aspect of the assignment” (Johnson, Johnson, & Holubec). ➤ Formative Assessment Suggestions: Combining individual accountability with positive interdependence ○ Content – Individual accountability ▪ Each member contributes and initials CDs separately; then the pair decides the best one(s) that fit the prompt ▪ Each member contributes and initials CMs separately; then the pair creates sentences together ▪ Member 1 writes TS; Member 2 writes CS; then the pair confers and confirms ○ Each member self-evaluates (positive comments; critique for improvement)
4.	Independent Work “You Do It Alone.”	➤ The Teacher: Provides feedback; evaluates student work; determines level of understanding; provides interventions as appropriate ➤ The Students: Work alone; rely on notes, activities, classroom and personal models to complete the assignment ➤ Formative and Summative Assessment Suggestions: Provide the appropriate rubric along with the prompt to the students before the process begins; score with the rubric(s) as your guide; display completed assignments

PARAGRAPH FORM

Playing sports is an important part of different cultures around the world. People play individual sports or team sports. To participate in a sport, a player must know the rules. Think about a sport that you play or find interesting. Then, in a one-chunk paragraph (2+:1), explain the importance of learning the rules of that sport.

(Used with Presenter's Slide Show – Non-Text-Based)

● _____

Note: If you are not in training, use the next page, providing your students with one sentence at a time along with the explanation of that sentence's function. Students will write each sentence on this page.

Parts of a Paragraph and the Jane Schaffer® Chunking Technique		
1.	INDENTING	
2.	TOPIC SENTENCE (TS)	
3.	CONCRETE DETAIL (CD)	
4.	COMMENTARY (CM)	
5.	CONCLUDING SENTENCE (CS)	
6.	A CHUNK	
7.	RATIO CD:CM	

The Expository/Informational Topic Sentence

Type	Subject Plus	Task Part of a Prompt without the Ratio	Possible Topic Sentence for a Body Paragraph
Process	<u>Subject</u> Plus - How to do something How something works	Explain the digestive process in a human being	<u>The digestive process</u> occurs in the digestive tract and three accessory organs .
Classification	<u>Subject</u> Plus Parts Characteristics	Classify the parts of a Broadway musical.	<u>The parts of a Broadway musical</u> include the libretto, score, lyrics, and choreography .
		Examine the differences between Romanticism and Realism.	Many writers of the <u>Romantic era</u> personify Nature and focus on the individual .
Exemplification	<u>Subject</u> Plus Examples	Discuss the effects of satire in the novels and dramas you have read.	<i>In <u>The Adventures of Huckleberry Finn</u>, Twain's satire</i> results in the transformation of Jim from fool to friend to father figure in Huck's eyes.
Cause and Effect	<u>Subject</u> Plus Causes that lead to an effect The effect that results from a cause If . . . , then . . .	Investigate how torn muscles occur in the body.	<u>A fatigued muscle</u> will tear .
		Explore how students would benefit from a new elective class.	<u>A one-semester course about finances and budgets</u> could help prepare students for living within their means .
Summarization	<u>Subject</u> Plus Main Idea	Summarize what you learned today in math class.	<u>The four kinds of angles</u> are determined by their relationship to 90 degrees .
Analysis	<u>Subject</u> Plus Opinion	Interpret how Cinderella feels at the beginning of the fairytale.	<u>Cinderella</u> feels mistreated .
Description	<u>Subject</u> Plus Specific details using the five senses/movement Imagery, connotation	Describe the phenomenon of a hurricane.	When the sky turns a deep, dark green , <u>a hurricane</u> could be looming .
Comparison and Contrast	<u>Subject</u> Plus - Similarities Differences	Compare state sovereignty under the Articles of Confederation and under the Constitution.	<u>Under the Articles of Confederation</u> , states have more control than they do under the Constitution .
Definition	<u>Subject</u> Plus - Clarification Quality	Define the meaning of success.	<u>Parental success</u> comes from watching one's child excel in school . (Another paragraph could be "experiencing love.")

A “Topical” Storm: Sample Topic Sentences

Type	<u>Subject</u> Plus	Task Part of a Prompt without the Ratio	Possible Topic Sentence for a Body Paragraph
Process	<u>Subject</u> Plus - How to do something How something works	Explain the process of hurricane development.	<u>The process of hurricane development</u> involves several different stages.
Classification	<u>Subject</u> Plus Parts - Characteristics	Classify the structure of a hurricane.	<u>The center of the hurricane</u> has a strong centrifugal force. (Other paragraph topics: eye, eye wall, pinwheel formation, etc.)
Exemplification	<u>Subject</u> Plus Examples	Investigate where most hurricanes occur.	Thesis: The Atlantic Coast, the Gulf of Mexico, and the Hawaiian islands are the most vulnerable to hurricanes. Topic Sentence: <u>The Gulf of Mexico</u> has produced some of the most devastating of hurricanes . Examples follow: Ivan, Dennis, Katrina, Rita
Cause and Effect	<u>Subject</u> Plus Causes that lead to an effect	Explain the causes a hurricane.	<u>Water vapor</u> causes a hurricane. (explicit cause) <u>Water vapor</u> fuels a hurricane. (implied cause – advanced)
Summarization	<u>Subject</u> Plus Main Idea	Summarize what you learned in class about wind speeds regarding a hurricane.	Hurricanes have <u>strong winds that spiral inward and upward at great speeds.</u>
Analysis	<u>Subject</u> Plus Opinion	In the aftermath of Hurricane Katrina, analyze the nation’s response to this natural disaster.	TS: <u>Government response</u> was slow. TS: <u>Media coverage</u> helped to illustrate the devastation. TS: <u>Housing</u> continues to be a problem years later. TS: <u>Displaced people</u> were abandoned by the government.
Description	<u>Subject</u> Plus Specific details using the five senses/movement Imagery, connotation	Describe the phenomenon of a hurricane.	When the sky turns a deep, dark green, <u>a hurricane</u> could be looming.
Comparison and Contrast	<u>Subject</u> Plus Similarities Differences	Determine the difference between a hurricane, a cyclone, and a typhoon.	<u>Hurricanes, cyclones, and typhoons</u> are the same phenomena in different locations.
Definition	<u>Subject</u> Plus Clarification - Quality	Define and describe the eye of a hurricane.	The most recognizable feature found within a <u>hurricane</u> is the <u>eye</u> .

How to Generate Commentary

Four Questions to Teach Students

Out of all the CDs I could have chosen, why did I choose this one?

What is important or significant about this particular CD?

What am I trying to show or prove with this CD (and I may not repeat my TS)

How does my CD relate to or connect with my TS, my thesis statement, and the writing prompt?

Topic Sentence

Teacher Callout:

Who or What Am I Writing About?

Student Response:

Topic Sentence, Blue Pen, Write My Answer Out!

Concrete Detail

Comes from Four Places:

- What I Have Read
- What I Have Seen
- What I or Someone Else Has Done
- What I or Someone Else Has Said

Commentary

Comes from Three Places:

- My Analytical Mind
- My Heart and Soul
- My Gut, Instincts, & Intuition

... and a little wiggle!

Concluding Sentence

Teacher Callout:

Concluding Sentence, Blue Pen, Get Your Mirror Out!

Student Response:

Connect and Reflect!
Give 'Em Stuff to Think About!

CONCRETE DETAIL	COMMENTARY	RATIO
stuff from the story on the surface paraphrase CD quotation CD	stuff from your head under the surface connotative words-- words with feelings you can describe to me	amount of CD:CM in a body paragraph

Terms for Social Studies – Wyatt Bingham, Houston, Texas

- FRQ - Free-Response Question; DBQ - Document-Based Question

MATH AND SCIENCE VERBS			
Concrete Detail		Commentary	
Objective 1			
Define	Give the precise meaning of a word or phrase as concisely as possible.	Estimate	Find the most likely value for an unknown quantity, based on the information provided and scientific knowledge.
Draw	Represent by means of pencil lines. Add lines. Add labels unless told NOT to do so.		
Label	Add labels to a diagram.		
List	Give a sequence of names or other brief answers with no elaboration. Each one is clearly distinguished from the others. The number required may be specified.		
Measure	Find a quantity and state it using a number and SI unit.		
State	Give a specific name or other brief answer. No supporting argument or calculation is necessary.		
Objective 2			
Annotate	Add brief notes to a diagram, drawing or graph.	Estimate	Find the most likely value for an unknown quantity, based on the information provided and scientific knowledge.
Apply	Use an idea, equation, principle, theory or law in a new situation.		
Calculate	Find an answer using mathematical methods. Show the working unless instructed NOT to do so.		
Describe	Give a detailed account, giving all the relevant information.		
Distinguish	Give the differences between 2 or more different items.		
Objective 3			
Compare	Give an account of <u>similarities</u> and <u>differences</u> between two (or more) items, referring to both (all) of them throughout. Comparisons can be given using a table.	Analyze	Interpret data to reach conclusions.
Construct	Represent or develop in graphical form.	Comment	Give a judgment based on a given statement or result of a calculation.
Determine	Find the only possible answer.	Deduce	Reach a conclusion from the information given.
Explain	Give a clear account including causes, reasons or mechanisms.	Derive	Manipulate a mathematical relationship(s) to give a new equation or relationship.
Show	Give the steps in a calculation or derivation.	Design	Give an account including, where possible, a range of arguments, assessments of the relative importance of various factors or comparison of alternative hypotheses.
Sketch	Represent by means of a graph showing a line and labeled but unscaled axes but with important features (for example, intercept) clearly indicated.	Discuss	Give an account including, where possible, a range of arguments, assessments of the relative importance of various factors or comparison of alternative hypotheses.
Solve	Obtain an answer using algebraic and/or numerical methods.	Evaluate	Assess the implications and limitations.
		Justify	Justify your answer.
		Suggest	Propose a possible answer or hypothesis.

TERMS FOR WRITING ACROSS THE CURRICULUM

	EXAMPLES OF CONCRETE DETAILS	COMMENTARY
Architecture	dot, line, plane	aesthetic response to design
Art	color, texture, shape, line, elements and principles of design, shape, space, form medium, figure ground, value (light and dark), balance, size	response to the art form analysis of technique.
Business	supply side economics, budget, debit and credit	cause and effect, analysis, prediction
Computers	hardware and software	application of computer real life, effect of information, revolution of daily living
Drama	delivery, blocking, stagecraft, voice, posture, projection, lights	audience response to a play, character motivation
English Language Arts	response to literature: stuff from the story (paraphrase and quotation cds) personal narrative: the 4 W's persuasive: example to support your opinion (sometimes facts, but not always)	response to literature: how a character feels personal narrative: how you or someone else felt persuasive: comment on the significance of the CD or discuss how someone feels about an issue
Industrial Technology	machinery, directions, manuals, tools to measure	why a procedure or piece of equipment is the right one to use, ways to connect/apply the skills or information to real life
Math	numbers, fraction signs, shapes angles, fraction bar, slope, graph paper, x/y axes, reasoning, formulas, equations, congruence, ratio, decimals, charts	connect/apply the principle to real life
Music	tone, position, scales, bass and treble clef, pitch, timbre, balance, blend	emotional response to the music, analysis of skill and technique
PE	rules of the game, kinesthetic information, history of a sport, concepts of teamwork and sportsmanship	reasons why PE is important
Science	data from labs, scientific process, steps in photosynthesis, models of DNA, observations, empirical observations	conclusions you draw from your data, connect or apply principle to real life, relationships between data points
Social Studies	names, dates, places, battles, treaties, maps, videotapes, audiotapes, political cartoons, timelines, primary sources, charts, graphs, captions, maps, legends, and keys	historical commentary, comment on the significance of the CD, political cartoons, inference

CONCRETE DETAIL VS. COMMENTARY

Read each sentence and decide if it is a concrete detail sentence or a commentary sentence. If the sentence is concrete detail, label it CD and tell how you know. If the sentence is commentary, label it CM and underline the CM word(s) in green.

- I Do
1. Milk is dairy. CD, what I read, health class
 2. Milk is good. CM
 3. The sun is made of hot gases.
 4. I went to bed at 8:00 P.M.
 5. California is a state within the U.S.A.
 6. Earth has five oceans.
 7. Oceans are saltwater.
 8. Oceans are prettier than lakes.
 9. Lakes are bodies of water.
 10. Surfing is fun.
 11. Apples are good to eat.
 12. Oranges have peels.
 13. Fruit will make a person healthy.
 14. Everybody needs sleep.
 15. I have the best story to tell.
 16. Plants need light and water to grow.
 17. Her behavior was wicked.
 18. There are many good reasons to stay up late watching television.
 19. The Chinese calendar has twelve or thirteen lunar months per year.
 20. The Chinese calendar is unusual.
 21. The teacher said, "Multicultural communication skills can be taught."

We
Do

You Do (Pairs)

Numbers 25-34
You Do (Independently)

- ⇒ 22. Without the Internet, my life would be boring.
- ⇒ 23. He really needs a haircut because he looks disheveled.
- ⇒ 24. He gets a haircut every four weeks.
25. The waves at the beach were so disappointing yesterday.
26. He rode the wave all the way up to the shoreline.
27. Without the benefit of guidance from friends and family, he is an unmoored vessel.
28. The warmth of our holiday celebration was enough to melt the blanket of snow outside.
29. Our school's tardy policy is ridiculous.
30. The school's tardy policy contains five rules for the teachers to follow.
31. It rained five inches today and made a puddle in front of my door.
32. Sunny days are the perfect time to have a picnic with friends and family.
33. California has 15 climate zones from cold mountain areas to the southern coastal region.
34. The ominous sky threatened a downpour.

ANSWER KEY CD VS. CM

Practice with Identifying CD and CM

1. Milk is dairy. CD
2. Milk is good. CM
3. The sun is made of hot gases. CD
4. I went to bed at 8:00 P.M. CD
5. California is a state within the USA. CD
6. Earth has five oceans. CD
7. Oceans are saltwater. CD
8. Oceans are prettier than lakes. CM
9. Lakes are bodies of water. CD
10. Surfing is fun. CM
11. Apples are good to eat. CM
12. Oranges have peels. CD
13. Fruit will make a person healthy. CM
14. Everybody needs sleep. CD
15. I have the best story to tell. CM
16. Plants need light and water to grow. CD
17. Her behavior was wicked. CM
18. There are many good reasons to stay up late watching television. CM
19. The Chinese calendar has twelve or thirteen lunar months per year. CD
20. The Chinese calendar is unusual. CM
21. The teacher said, "Multicultural communication skills can be taught." CD
22. Without the Internet, my life would be boring. CM
23. He really needs a haircut because he looks disheveled. CM
24. He gets a haircut every four weeks. CD
25. The waves at the beach were so disappointing yesterday. CM
26. He rode the wave all the way up to the shoreline. CD
27. Without the benefit of guidance from friends and family, he is an unmoored vessel. CM
28. The warmth of our holiday celebration was enough to melt the blanket of snow outside. CM
29. Our school's tardy policy is ridiculous. CM
30. The school's tardy policy contains five rules for the teachers to follow. CD
31. It rained five inches today and made a puddle in front of my door. CD
32. Sunny days are the perfect time to have a picnic with friends and family. CM
33. California has 15 climate zones from cold mountain areas to the southern coastal region. CD
34. The ominous sky threatened a downpour. CM

Notes

All Students Can Think; All Students Can Write.

*“Educating the mind without educating the
heart is no education at all.”
Aristotle*

YOUR PRACTICE

After you review this example page, list at least three to five **concrete details** in red about your room and three to five **commentary** phrases about how you feel about those **concrete details**.

You may write in complete sentences or just use words and phrases. These will not be quotations since you will write words that identify objects in your room. The only way you could use a quotation as a **concrete detail** about your room is if you include something you or someone else said about your room.

Provide three to five **commentary** phrases that show how you feel and your attitude about your room or that show the significance of this space for you.

We've provided an example for you here.

My room: (examples of concrete details) • ten feet by twenty feet • painted blue • red comforter on my bed • my window shades are white • one dresser • stuffed animals • family pictures on the wall • do my homework there • My mom said, "Clean up your room, please!!" • two bookshelves	My room: (examples of commentary) • perfect size • love it • favorite colors • content, relaxed • endearing heirloom • cute, cuddly • my special place • I'm comfortable and focused • looks like a tornado hit it because I am messy • personal reflection and meaningful quiet time
---	--

Reminder: At this point, your **concrete details** should not have connotation. The **concrete details** are reporting the facts and details about your room. If you were to walk in your room, you could touch each object or hear someone speak about your room.

Reminder: Your **commentary** words will have connotation, which is feeling or attitude, such as the example words "perfect," "love," "favorite," "content," and "relaxed," to name just a few. You cannot see or touch these ideas. They are abstract.

(concrete details in red) • • • • • • •	(commentary in green) • • • • • • •
---	---

Now practice with another topic.

(concrete details in red) • • • • • • •	(commentary in green) • • • • • • •
--	--

(concrete details in red) • • • • • • •	(commentary in green) • • • • • • •
--	--

Notes and Thoughts to Remember

Use this notepad to jot down any insights you have about what you're learning or any important and helpful points.

In the Jane Schaffer Writing Program, the smallest and most important unit of meaning about one idea expressed in sentences is called a “chunk.” Chunks make up a short response. Also, when writers are asked to write one paragraph to answer a question or develop body paragraphs for an essay, the chunk is between the **topic sentence** and the **concluding sentence**.

Chunks are not found in an introduction or a conclusion of an essay. Later in this workbook, we will teach the introduction and the conclusion for an essay.

A chunk is at least three sentences. At least three sentences are required to fully explain one point in a short response or a paragraph. Those three sentences are made up of **concrete details** or a combination of **concrete details** and **commentary**. For expository writing, the highest scoring answers apply the following ratios of **concrete details** to **commentary**:

most widely used (2+: 1)	popular summary response (3+: 0)
-----------------------------	-------------------------------------

The first number in the ratio always represents **concrete detail**. The second number represents **commentary**. Writers should not change these ratios. These ratios have proven to yield high quality responses.

One-Chunk Body Paragraph Sentence Layout

2+:1 Expository Layout	3+:0 Summary Layout
Topic Sentence Concrete Detail Concrete Detail + Commentary Concluding Sentence	Topic Sentence Concrete Detail Concrete Detail Concrete Detail + Concluding Sentence

THE LESSON | SAMPLE PARAGRAPHS

Once the writer understands chunks, ratios, and the modes of writing, the prompt can include those ideas. The following prompts and sample responses are examples of expository paragraphs. The first two responses apply the 2+:1 ratio, and the third response applies the 3+:0 ratio.

Prompt: In a well-written one-chunk expository paragraph (2+:1), explain the benefits of accomplishment.

- a. The first response is an example of a writer who loves sports and wanted to share information that she found in a *Sports Illustrated* article that fit the prompt.

Most people would agree that praise and adulation for a job well done feel good and certainly have benefits. ¹After Super Bowl XLV, not only did the winning team receive a ticker tape parade, but also each player on the team received an \$83,000 bonus (Alder). ²Celebrity athletes are hired by companies, such as Nike and Cheerios, to promote their products. ³Some athletes even have fan clubs. ¹Rewards such as money, compliments, and admiration make a person feel like all of the hard work over the years has paid off. Receiving honors and acknowledgments as well as enjoying the perks of being famous are benefits of a person's accomplishments.

- b. The second response is an example of a writer who remembered a personal story (anecdote) that fit the prompt and decided to share it.

A sense of pride accompanies a personal accomplishment. I practiced for months for my senior piano recital. One of the pieces included in the set was a song I composed myself. When it was time to perform, I stood next to my piano and looked out at the audience and said, "This first song is dedicated to my beloved grandmother." A nervous excitement precluded my live performance, but my fingers danced gracefully across the keys, and my heart beat with joy. Doing something I love and doing it well are cherishable rewards in and of themselves.

Prompt: Write a one-chunk expository paragraph (3+:0) that summarizes what we learned in class today about angles. For your concluding sentence, explain the key to identifying angles.

- c. The third response to a different prompt requires the writer to reflect on the skills she learned in math class. Notice how no commentary is necessary.

In class today, we learned that angles can be classified into different categories, depending on their degree measurements. The categories we learned are acute, right, obtuse, and straight. The angles are defined by their relationship to 90°. Acute angles are less than 90°. Right angles are equal to 90°. Obtuse angles are greater than 90° but less than 180°. Straight angles are 180° (equal to two 90° angles). By understanding degree measurements, I can easily classify angles.

THE GRADUAL RELEASE MODEL WITH JSWP

1.	Modeling “I Do It.”	➤ The Teacher: Provides direct instruction; establishes goals and purpose; models desired outcomes; utilizes the “Think Aloud” teaching strategy* ➤ The Students: Actively listen; take notes, ask questions for clarification ➤ Equipment and Materials: ○ hard graphic organizers and pens for each student and teacher (students copy as teacher presents each step and the thinking behind each step) ○ hard copy of the model from start to finish for students who need assistance ○ dry erase board, interactive whiteboard, document camera, chalkboard ○ if digital, use JSWP Google Docs, JSWP App, Bring Your Own Device (BYOD), laptop ➤ Formative Assessment Suggestions: ○ develops a clear personal model on paper or digitally ○ on-task behavior, focus ○ asking questions, clarification ○ color-coding correctly ○ correct grammar, mechanics, usage *“Think Aloud” ○ Verbalize your thinking—make it visible—as you simultaneously teach a lesson. (Stream-of-Consciousness, information processing) ○ “Think Aloud” through the JSWP process while completing each step with fidelity.
2.	Guided Instruction “We Do It.”	➤ The Teacher: Provides interactive instruction; works with students; checks, prompts, gives clues; provides additional modeling; meets with needs-based groups; asks and responds to questions. ➤ The Students: Interact with teacher and classmates; complete process with and alongside others, provide input to lesson ➤ Equipment and Materials: hard copies or digital graphic organizers; pens ➤ Formative Assessment Suggestions: ○ Everyone offers two comments for each part of the process through the final draft. ○ Proper graphic organizers and colors are used. ○ Group processing after each step in the process: “reflecting on the group’s work to clarify and improve the effectiveness of the members in working together to achieve the group’s goals by (a) describing which member actions were helpful and unhelpful and (b) making decisions about what actions to continue or change” (Johnson, et al.). ○ Everyone submits entire process (after each step).
3.	Paired Work “You Do It Together.”	➤ The Teacher: Moves among pairs; clarifies confusion; provides support ➤ The Students: Work with classmates; collaborate on authentic task; consolidate learning; complete process in pairs; look to peers for clarification ➤ Promotive Interaction Suggestions: “Students promote each other’s learning by helping, sharing, and encouraging efforts to learn. Students explain, discuss, and teach what they know to classmates. Teachers structure the groups so that students sit knee-to-knee and talk through each aspect of the assignment” (Johnson, Johnson, & Holubec). ➤ Formative Assessment Suggestions: Combining individual accountability with positive interdependence ○ Content – Individual accountability ▪ Each member contributes and initials CDs separately; then the pair decides the best one(s) that fit the prompt ▪ Each member contributes and initials CMs separately; then the pair creates sentences together ▪ Member 1 writes TS; Member 2 writes CS; then the pair confers and confirms ○ Each member self-evaluates (positive comments; critique for improvement)
4.	Independent Work “You Do It Alone.”	➤ The Teacher: Provides feedback; evaluates student work; determines level of understanding; provides interventions as appropriate ➤ The Students: Work alone; rely on notes, activities, classroom and personal models to complete the assignment ➤ Formative and Summative Assessment Suggestions: Provide the appropriate rubric along with the prompt to the students before the process begins; score with the rubric(s) as your guide; display completed assignments

The Digestive System

Writing Prompt

(3+:0)

Understanding how our body functions helps us to make wise choices about our health and begins the preparation for the future doctors among us. Think about the complex digestive system. Then, in a one-chunk paragraph (3+:0), summarize what we learned in class today about the many parts of the digestive system. *For your concluding sentence, connect what you learned with a person's general health.*

**SUMMARY MODEL**

SCIENCE PROMPT: Write a one-chunk paragraph (3+:0) that summarizes what we learned in class today about the many parts of the digestive system. For your concluding sentence, connect what you learned about a person's general health.

^{TS}The digestive system is made up of the digestive tract and three accessory organs. ^{CD1}The digestive tract is a long tube that starts at the mouth where food enters. ^{CD2}The esophagus is a passageway from the mouth to the stomach. ^{CD3}When food leaves the stomach, it travels through the small intestine where most of the nutrients are absorbed. ^{CD4}The liver, gallbladder, and pancreas, which are not part of the digestive tract, release enzymes into the small intestine to help digest the food. ^{CD5}Any undigested food passes into the large intestine and is eliminated from the body. ^{CS}It would be difficult to digest food and absorb nutrients without the help of all these parts.

Today's Lesson

Writing Prompt

(3+:0)

Many fields of study and career choices depend on the participants understanding geometry. Read carefully your notes on angles. Then, in a well-developed one-chunk paragraph (3+:0), summarize what we learned in class today about the four kinds of angles. *For your concluding sentence, explain the key to identifying angles.*

T-CHART
(3+:0)

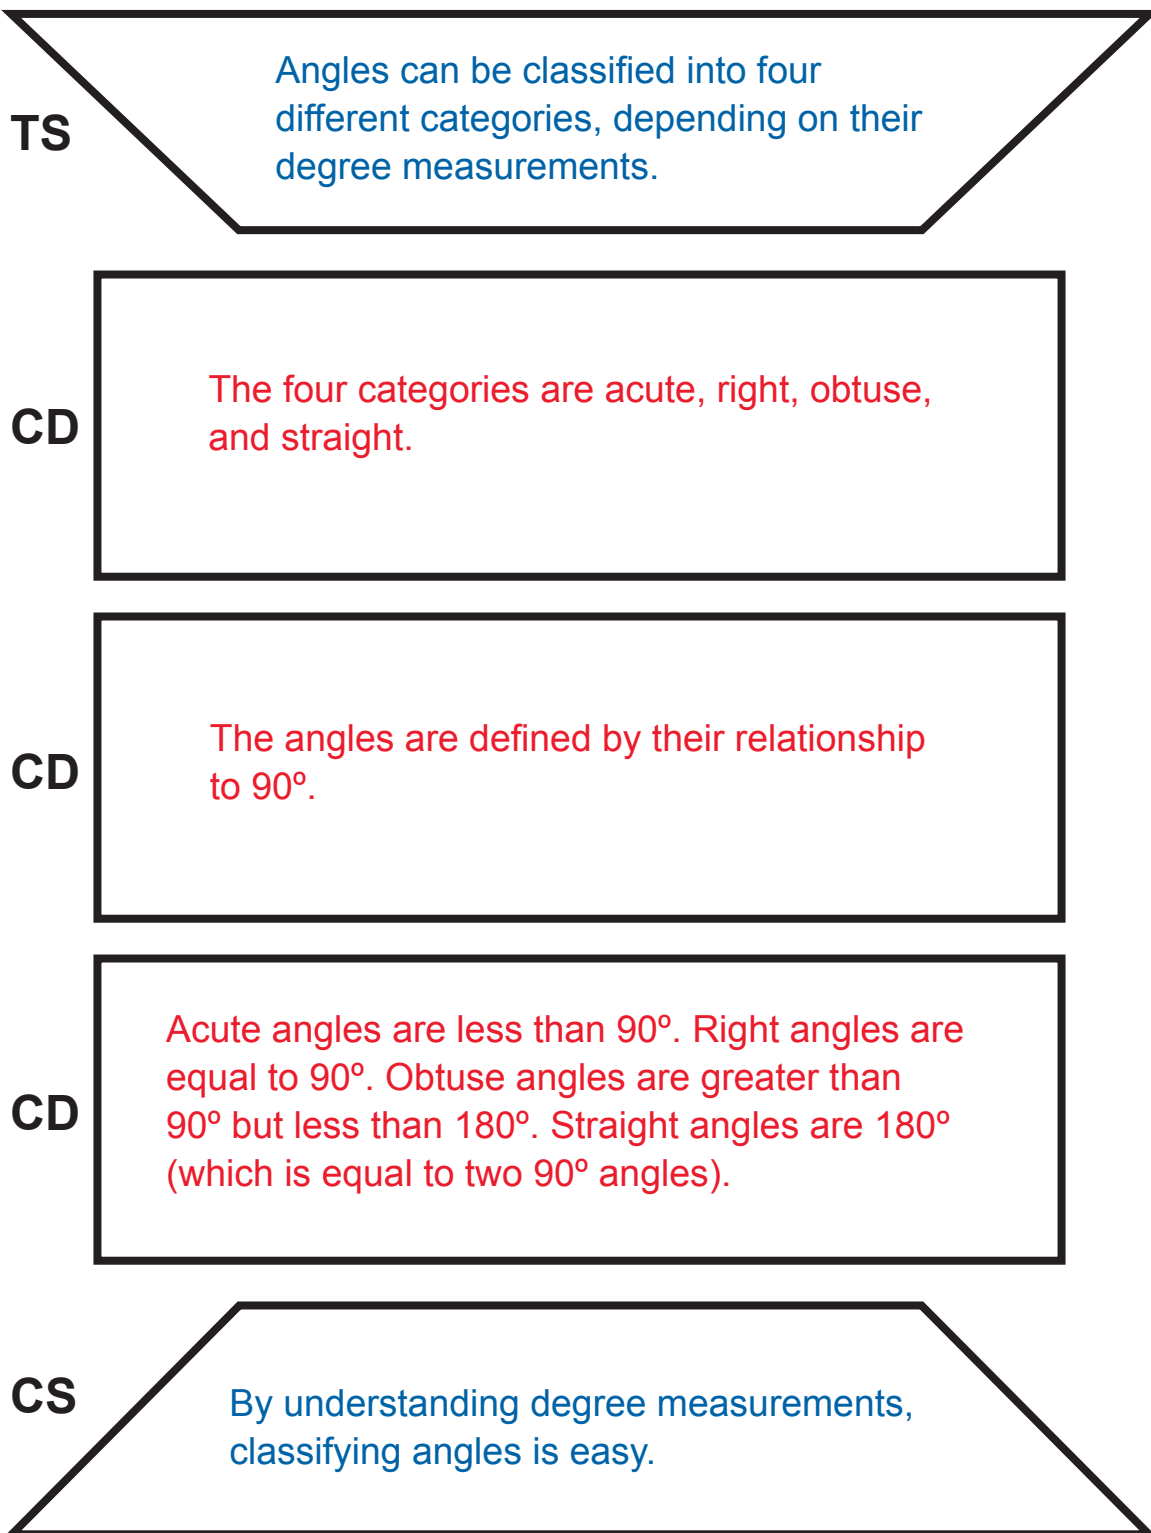

PROMPT: Write a one-chunk paragraph (3+:0) that describes the four kinds of angles we've studied this week. *For your concluding sentence, explain the key to identifying angles.*

TOPIC SENTENCE: There are four kinds of angles.

CDs	CMs
• right – 90° • acute – < 90° • straight – 180° = 2 90°s • obtuse – > 90° and < 180°	

CONCLUDING SENTENCE: By understanding degree measurements, classifying angles is easy.

SHAPING SHEET (3+:0)

Note: With mathematicians, we believe that a concluding sentence may ask students to identify objects or ideas about which the learning can be applied. (For your concluding sentence, identify four objects in your classroom which illustrates each of the angles.)

**SUMMARY EXAMPLE**

MATHEMATICS PROMPT: Write a one-chunk paragraph (3+:0) that summarizes what we learned in class today about the four kinds of angles. For your concluding sentence, explain the key to identifying angles.

^{TS}Angles can be classified into four different categories, depending on their degree measurements. ^{CD1}The four categories are acute, right, obtuse, and straight. ^{CD2}The angles are defined by their relationship to 90° . ^{CD3}Acute angles are less than 90° . ^{CD4}Right angles are equal to 90° . ^{CD5}Obtuse angles are greater than 90° but less than 180° . Straight angles are 180° (equal to two 90° angles). ^{CS}By understanding degree measurements, I can easily classify angles.

Scientific American Article

Writing Prompt

(3+:0)

More than three decades of research have shown that a focus on effort – not intelligence or ability – is key to success in school and life. Read carefully “The Secret to Raising Smart Kids.” Then, in a one-chunk paragraph (3+:0), summarize the “Two Views of Intelligence.” *For your concluding sentence, explain how this information might affect a student’s life.*

YOUR PRACTICE

Scientific American Mind - November 28, 2007

Permission to reproduce given by the author, Carol Dweck.

The Secret to Raising Smart Kids

Hint: don't tell your kids that they are. More than three decades of research shows that a focus on effort - not on intelligence or ability - is key to success in school and in life.

By Carol S. Dweck

- [1] Our society worships talent, and many people assume that possessing superior intelligence or ability - along with confidence in that ability - is the recipe for success. In fact, however, more than 30 years of scientific investigation suggest that an over emphasis on intellect or talent leaves people **vulnerable** to failure, fearful of challenges and unwilling to remedy their shortcomings.
- [2] The result plays out in children who coast through the early grades under the dangerous notion that no-effort academic achievement defines them as smart or gifted. Such children hold an **implicit** belief that intelligence is **innate** and fixed, making striving to learn seem far less important than being (or looking) smart. This belief also makes them see challenges, mistakes and even the need to exert effort as threats to their **ego** rather than as opportunities to improve. And it causes them to lose confidence and motivation when the work is no longer easy for them.
- [3] Praising children's innate abilities, reinforces this mindset, which can also prevent young athletes or people in the workforce and even marriages from living up to their potential. On the other hand, our studies show that teaching people to have a "growth mindset," which encourages a focus on effort rather than on intelligence or talent, helps make them into high achievers in school and in life.

The Opportunity of Defeat

- [4] I first began to investigate the underpinnings of human motivation - and how people **persevere** after setbacks - as a **psychology** graduate student at Yale University in the 1960s. Animal experiments by psychologist Martin Seligman, Steven Majer and Richard Solomon of the University of Pennsylvania had shown that after repeated failures, most animals conclude that the situation is hopeless and beyond their control. After such an experience, the researchers found, an animal often remains **passive** even when it can affect change - a state they called learned helplessness.

Vocabulary

vulnerable - open to moral attack, criticism, temptation, etc.

implicit - unquestioning or unreserved; absolute.

innate - existing in one from birth; inborn; native.

ego - self esteem or self image; feelings.

persevere - to persist in anything undertaken; maintain a purpose in spite of difficulty, obstacles or discouragement; continue steadfastly.

psychology - the science of human and animal behavior.

NOTES

NOTES

- [5] *People* can learn to be helpless, too, but not everyone reacts to setbacks this way. I wondered: Why do some students give up when they encounter difficulty, whereas others who are no more skilled continue to strive and learn? One answer, I soon discovered, lay in people's beliefs about why they had failed.
- [6] **Two Views of Intelligence**
Several years later I developed a broader theory of what separates the two general classes of learners - helpless versus mastery-oriented. I realized that these different types of students not only explain their failures differently, but they also hold different "theories" of intelligence. The helpless ones believe that intelligence is a fixed trait: you have only a certain amount, and that's that. I call this "fixed mind-set". Mistakes crack their self-confidence because they attribute errors to a lack of ability, which they feel powerless to change. They avoid challenges because challenges make mistakes more likely and looking smart less so. Such children shun effort in the belief that having to work hard means they are dumb.
- [7] The mastery-**oriented** children, on the other hand, think intelligence is **malleable** and can be developed through education and hard work. They want to learn above all else. After all, if you believe that you can expand your intellectual skills, you want to do just that. Because slip ups stem from a lack of effort, not ability, they can be remedied by more effort. Challenges are energizing rather than **intimidating**; they offer opportunities to learn. Students with such a growth **mind-set**, we predicted, were destined for greater academic success and were quite likely to outperform their counterparts.
- [8] We **validated** these expectations in a study published in early 2007. Psychologist Lisa Blackwell of Columbia University and Kali H. Trzesniewski of Stanford University and I monitored 373 students for two years during the transition to junior high school, when the work gets more difficult and the grading more **stringent**, to determine how their mindsets might affect their math grades. At the beginning of seventh grade, we assessed students' mind-sets for asking them to agree or disagree with statements such as "Your intelligence is something very basic about you that you can't really change." We then assessed their beliefs about other aspects of learning and looked to see what happened to their grades.
- [9] As we predicted, the students with a growth mindset felt that learning was a more important goal in school than getting good grades. In addition, they held hard work in high regard, believing that the more you labored at something, the better you would become at it. They understood that even geniuses have to work hard for their great accomplishments. Confronted by a setback such as a disappointing test grade, students with a growth mind-set said they would study harder or try a different strategy for mastering the material.

Vocabulary

passive - not reacting visibly to something that might be expected to produce manifestations of an emotion or feeling.

oriented - to make familiar with or adjusted to facts, principals, or a situation.

malleable - adaptable or traceable.

intimidating - to force into or deter from some action by inducing fear.

validated - to give official sanction, confirmation, or approval to.

stringent - rigorously binding or exacting; strict; severe.

assessed - to determine the value, significance, or extent of; appraise.

MAIN IDEA SHEET STEPS

1. Write the title of the article in quotation marks on the space provided. Tell students the title is often a clue to the main idea. Have them make a guess at what the article might be about.
2. Read the article, and underline in black a sentence or phrase or section that sums up the main idea or is the thesis of the article. Quote that sentence/section or paraphrase in the space for the main idea. (Reflect on whether or not their predictions about the main idea were correct. Was the title helpful or was it misleading?) If the article doesn't explicitly state a main idea, then have students find the main ideas of each paragraph or section of the article and jot notes about that next to the paragraphs. Use that information to determine a main idea.
3. Next, underline two CDs in the article that support the main idea and write them in the space provided on the sheet. Be sure to cite the page number or paragraph number for the CD if appropriate.
4. For argumentation or explanatory pieces, write some CM nuggets next to the CDs on the article to start thinking about the importance/significance/implications of the specific evidence you chose. These annotations will help students formulate a thesis statement for their papers.
5. For narrative pieces, use the title to help determine the main idea of the story. Underline two CDs that show the main idea or the main action of the story.
6. For poetry, use the title to help determine the main idea of the poem. Underline two CDs that show the main images or the main action of the poem.

FORMAL LAB REPORT FORMAT

The following is a guide for all formal lab reports in this course. You need not limit yourself to this outline. If additional information is warranted, then please add it.

Title

- The title should indicate what the lab is all about. It is usually written in an IV vs. DV format. Centered at the top of the page.

Introduction & Background

- Indicate what you hope to learn (purpose of the lab)
- Clearly identify what you think is going to happen (hypothesis)
- Include important characteristics of the IV and DV (applicable to the study) - with citations

Living Organism

- Scientific Name
- Habitat - could include location in the world and specific ecosystem
- Lifestyle - characteristics about how it lives (nocturnal)
- Anatomy - anything that is applicable to the study
- Physiology - relate to the anatomy
- Feeding - what and how it eats (mode of nutrition)
- Behavior - mating rituals, communication, etc...

Energy

- Definition
- Form
- Produced
- Measured

Matter

- Name
- Formula
- Chemical properties
 - Atomic properties
- Physical properties
- History
- Uses
- Occurrence - where is it found and "life" span
- Production - how it is produced if not a natural element
- Previous related studies and their findings
- Caveat: This introduction section will take some research. Do not "wing it" by making up information from your head!!

Materials and Methods

- A brief description of the procedure (major steps) to show how the lab was conducted, including materials used
- List of components of experimental design: independent variable, dependent variable, control factors, constants
- Describe methods for controlling variables
- Describe methods for collecting data
- Note any departure from the instructions given
- Drawing or pictures can be added if set up is unique

Results (present the data)

- Construct all data tables and charts to present data collected
- Titles and labels for all tables and charts must be included
- Construct all graphs needed to show results
 - Correct type (bar, line, pie)
 - Title
 - Appropriate units
 - Labeled axis
 - Legend
- Labeled diagrams or photos

Conclusion & Discussion

- What was the purpose?
- What happened?
- Based on the data, state a valid conclusion and explain why you think the results turned out the way they did.
- Explain any unexpected results and why those results may have been obtained (error analysis).
- How do the results compare to the research?
- Recommendations for further study

FORMAL LAB REPORT FORMATTitle

Introduction & BackgroundWhat do you hope to learn (purpose of the lab)?

What you think is going to happen (hypothesis)?

Include important characteristics of IV and DV (applicable to the study) – with citations.

LAB REPORT

JSWP COLOR-CODED GRADING RUBRIC

By Amy Cote, AP Biology Consultant

By using this rubric, you should be able to know what your grade will be for your lab prior to submitting it. Make sure you have all of these items in your report.

REPORT ITEM	POSSIBLE POINTS
Title	3
Introduction	(20)
Purpose of lab	5
Hypothesis	3
Background info	10
Previous related study	2
Materials & Methods	(18)
Materials listed*	5
Clearly stated procedures*	5
Experimental design	4
Controlling variables	4
Results	(24)
Data in tables	10
Graphs present	10
Title/labels	2
Axis labeled correctly	2
Conclusion	(25)
Summary of results	4
Interpretation of results	12
Results compared to hypothesis	2
Errors analysis	2

Lab Write-Up Rubric

Designed and JSWP Color-Coded by Dhahran High School Science Department

NAME:	LAB REPORT SECTION	POINTS POSSIBLE	POINTS EARNED	COMMENTS
PERIOD:	LAB DESIGN			
	Heading: Include: (a) title of the lab (centered); (b) your name, (right); (c) the names of your lab partners (right); and, (d) the date(s) (right) the lab was performed.	.5		
	Research Question: The question should be (a) focused and (b) quantifiable.	1		
Lab Format: Font: 10 pt Times New Roman. 1.5 spaced. 1 inch margins Should be formally written, do not use "I", "You" or "We" NOTES TO STUDENT: Look for bolded Schaffer Writing prompts (i.e. 3+:0, 2+:1, etc.)	Background Information: (a) Connect how this lab report relates to what we're studying in class right now. (2+:1) (b) What information and vocabulary would a reader need to know to understand your report (cite sources)?	1		
	Variables: (a) list independent, dependent (w/ units) and (b) controlled variables.	2		
	Hypothesis: (a) Answer the research question using the independent and dependent variable. (b) Cite the sources that guided you to your answer.	2		
	Labeled Diagram: (a) Sketch and (b) label an appropriate diagram of your lab set up. Show how someone would set up your lab in the same way.	1		
	Materials: (a) What did you use to conduct your experiment? (b) List amounts and numbers for all materials (The materials should all be referenced in your procedure!).	1		
	Procedure: Use a numbered list to describe the steps to performing the experiment. (Be sure you repeat the experiment more than once (multiple trials). It should read like a cookbook. Someone should be able to read it and get the same results you did.)	1		
	Method for Controlling Variables: For each control variable listed, state how you are going to keep it the same from trial to trial.	1		
	DATA COLLECTION AND PROCESSING			
	Data Collection: (a) Put all your raw data neatly in a table; be sure to include all quantitative and qualitative raw data. (Consult guidelines on back!)	1		
	Data Processing: (a) The data will need to be processed in some way, such as averaging, squaring, dividing, etc., in order to prepare it for graphing. (b) Include this information in a second table. (Consult guidelines on back!)	1		
	Graphs: (a) Choose the right graph! Be sure to label the axis and include a title. Units. (b) Don't forget a legend, too! (Consult guidelines on back!)	1		
	CONCLUSION AND EVALUATION			
	Analysis: Please! (a) Restate the question, hypothesis, and paraphrase the procedure. (b) In multiple chunks, discuss how your results differed or supported your hypothesis, citing your data! (1:2+)	2		
	Evaluation: Discuss all relevant sources of error and their effects on your results. (2+:1)	1		
	Improvement: Explain how to modify the experimental technique if needed. (These improvements should specifically relate to the Evaluation section.)	1		
	Conclusion: Based on the evidence stated above, the hypothesis is / is not supported.	2		
	Bibliography: Use Modern Language Association (MLA), the same format you use in English Class.	.5		
		20 POINTS POSSIBLE		<=Your Score

THE GRADUAL RELEASE MODEL WITH JSWP

1.	Modeling “I Do It.”	➤ The Teacher: Provides direct instruction; establishes goals and purpose; models desired outcomes; utilizes the “Think Aloud” teaching strategy* ➤ The Students: Actively listen; take notes, ask questions for clarification ➤ Equipment and Materials: ○ hard graphic organizers and pens for each student and teacher (students copy as teacher presents each step and the thinking behind each step) ○ hard copy of the model from start to finish for students who need assistance ○ dry erase board, interactive whiteboard, document camera, chalkboard ○ if digital, use JSWP Google Docs, JSWP App, Bring Your Own Device (BYOD), laptop ➤ Formative Assessment Suggestions: ○ develops a clear personal model on paper or digitally ○ on-task behavior, focus ○ asking questions, clarification ○ color-coding correctly ○ correct grammar, mechanics, usage *“Think Aloud” ○ Verbalize your thinking—make it visible—as you simultaneously teach a lesson. (Stream-of-Consciousness, information processing) ○ “Think Aloud” through the JSWP process while completing each step with fidelity.
2.	Guided Instruction “We Do It.”	➤ The Teacher: Provides interactive instruction; works with students; checks, prompts, gives clues; provides additional modeling; meets with needs-based groups; asks and responds to questions. ➤ The Students: Interact with teacher and classmates; complete process with and alongside others, provide input to lesson ➤ Equipment and Materials: hard copies or digital graphic organizers; pens ➤ Formative Assessment Suggestions: ○ Everyone offers two comments for each part of the process through the final draft. ○ Proper graphic organizers and colors are used. ○ Group processing after each step in the process: “reflecting on the group’s work to clarify and improve the effectiveness of the members in working together to achieve the group’s goals by (a) describing which member actions were helpful and unhelpful and (b) making decisions about what actions to continue or change” (Johnson, et al.). ○ Everyone submits entire process (after each step).
3.	Paired Work “You Do It Together.”	➤ The Teacher: Moves among pairs; clarifies confusion; provides support ➤ The Students: Work with classmates; collaborate on authentic task; consolidate learning; complete process in pairs; look to peers for clarification ➤ Promotive Interaction Suggestions: “Students promote each other’s learning by helping, sharing, and encouraging efforts to learn. Students explain, discuss, and teach what they know to classmates. Teachers structure the groups so that students sit knee-to-knee and talk through each aspect of the assignment” (Johnson, Johnson, & Holubec). ➤ Formative Assessment Suggestions: Combining individual accountability with positive interdependence ○ Content – Individual accountability ▪ Each member contributes and initials CDs separately; then the pair decides the best one(s) that fit the prompt ▪ Each member contributes and initials CMs separately; then the pair creates sentences together ▪ Member 1 writes TS; Member 2 writes CS; then the pair confers and confirms ○ Each member self-evaluates (positive comments; critique for improvement)
4.	Independent Work “You Do It Alone.”	➤ The Teacher: Provides feedback; evaluates student work; determines level of understanding; provides interventions as appropriate ➤ The Students: Work alone; rely on notes, activities, classroom and personal models to complete the assignment ➤ Formative and Summative Assessment Suggestions: Provide the appropriate rubric along with the prompt to the students before the process begins; score with the rubric(s) as your guide; display completed assignments

Writing Prompt

Working together to achieve a goal requires team commitment. Think of two sports you enjoy. Then, in a one-chunk paragraph (2+:1), explain the importance of learning the rules of team sports.

GATHERING CDS

Task: Then, in a one-chunk paragraph (2+:1), explain the importance of
learning the rules of team sports.

1. Think of 5 or more possible concrete details (CDs) that would fit the prompt and write them below:
2. Circle the 2 that fit the assignment best.
3. Decide the best order and write *CD1* in red next to the first one and *CD2* in red next to the second one.

- CD1
- football - ten yards for a first down
 - basketball - shot clock to keep time
 - soccer - hands may not touch the ball

- CD2
- baseball - "three strikes and you're out"
 - tennis - ball must not go over the line
 -
 -

T-CHART (2+:1)

TASK: Then, in a one-chunk paragraph (2+:1), explain the importance of
learning the rules of team sports.

TOPIC SENTENCE: Learning the rules of team sports is vital.

REVISED TOPIC SENTENCE: Abiding by the rules of team sports safeguards
against chaos and helps events run smoothly .

CDs	CMs (This is/was important because)... Why?
•1st CD: In football a first down is made by going ten yards.	equality no chaos fairness unified by a goal understands how to win deal with defeat game runs smoothly consistency accept consequences "a good sport"
•2nd CD: In baseball, "three strikes and you are out."	

COMMENTARY SENTENCE: Specific rules result in fairness and consistency.

CONCLUDING SENTENCE: Players who accept the consequences of rules
are better able to deal with defeat and show good sportsmanship when they win.

THE SHAPING SHEET

2+:1

TS

No matter the outcome of a game, abiding by the rules safeguards players against chaos and helps competitive sports run smoothly.

1ST
CD

For example, in football a first down is made by progressing ten yards toward the goal line.

2ND
CD

Another popular sport is baseball. In this game, the players understand "three strikes, and you are out!"

CM

Specific rules result in fairness and consistency.

CS

Players who accept the consequences of rules are better equipped to face defeat and enjoy victory.

PARAGRAPH FORM

• No matter the outcome of a game, abiding by the rules safeguards
players against chaos and helps competitive sports run smoothly. In
American football, for example, a first down is made by progressing ten
yards toward the end zone and a touchdown. Another popular pastime
is baseball. In this nine-inning game, the players understand “three
strikes and you’re out!” Adhering to specific rules results in fairness and
consistency. Competitors who embrace the expectations of sportsmanship
are better equipped to face both defeat and victory with grace.

Notes:

- The final paragraph may be written on the JSWP Paragraph Form or typed.
- The final paragraph may be written in the JSWP colors to demonstrate the students’ knowledge of the elements and any weaving; or, the final paragraph may be written or typed in black.
- Notice the transitions to introduce sentences of CD (“for example,” “Another,” “In this”)
- Notice the variation in sentence openings.
- Notice the variation in sentence types (simple, complex)
- Notice how the student was required to underline further revisions from the JSWP Shaping Sheet. Requiring students to show their edits and revisions 1) instills in students the true meaning of editing and revising; 2) reminds students that good writers are constantly improving their work; and 3) assists teachers in locating the students’ edits and revisions for assessment of those standards/skills.

Notes

All Students Can Think; All Students Can Write.

*“Educating the mind without educating the
heart is no education at all.”
Aristotle*

The Hammurabi Code

Writing Prompt

(2+:1)

People who coexist peacefully in society have followed certain codes of behavior for centuries. Read carefully “The Hammurabi Code.” Then, in a one-chunk paragraph (2+:1), explain the significance of the Hammurabi Code.

Code of Hammurabi

The Code of Hammurabi (also known as the **Codex Hammurabi** and **Hammurabi's Code**) was created c. 1760 B.C.E. and is one of the earliest sets of laws and one of the best preserved examples of this type of document from ancient Mesopotamia. The laws are numbered from 1 to 282 and are inscribed in Old Babylonian on an eight-foot-tall stele of black basalt. It was discovered in December 1901, in Susa, Elam, which is now Khuzestan, Iran. It is currently on display at the Louvre Museum in Paris.

The Code contains an enumeration of crimes and their various punishments as well as settlements for common disputes and guidelines for citizens' conduct. The Code does not provide opportunity for explanation or excuses, though it does imply one's right to present evidence. The Code was openly displayed for all to see; thus, no man could plead ignorance of the law as an excuse. Scholars, however, presume that few people could read in that era, as literacy was primarily the domain of scribes. Hammurabi had the laws inscribed in stone, so they were immutable. In the upper part of the stela, Hammurabi is shown in front of the throne of the sun god Shamash.

The code is often pointed to as the first example of the legal concept that some laws are so basic as to be beyond the ability of even a king to change. By writing the laws on stone they were immutable. This concept lives on in most modern legal systems and has given rise to the term written in stone.

Work Cited

"Stele." *New World Encyclopedia*. 22 Oct 2015, 19:25 UTC. 15 Jun 2022, 22:38
<<https://www.newworldencyclopedia.org/p/index.php?title=Stele&oldid=991544>>.

Note: A stela is **an upright monument containing information in the form of texts, images or a combination of the two**. Stelae have been used to commemorate people or events, to delineate physical spaces or as objects through which to access the dead or divine. "Stele" is another form of "stela."

GATHERING CDS (2+:1)

PROMPT: _____ In a one-chunk paragraph (2+:1), explain the significance of the Hammurabi Code.

1. Think of 5 or more possible concrete details (CDs) that would fit the prompt and write them below.
2. Circle the 2 or more that fit the assignment best.
3. Decide the best order and write CD1 in red next to the first one and CD2 in red next to the second one.

• created in c. 1760 B.C.E "one of the earliest sets of laws"

CD1 • crimes and punishments "settlements for common disputes" "guidelines for citizens' conduct"

• "openly displayed"

• considered "first example of legal concept"

CD2 • "some laws are so basic" "beyond the ability of even a king to change"

• "written in stone" expression - inscribed on an "eight-foot-tall stele of black basalt"

Embedding Quotations

To quote information, writers “embed” or “integrate” the quoted material into their own sentences and style of writing, setting the stage for the quotation by placing it in context. Writers must seamlessly lead into quotations with complete thoughts and complete grammatical structures without appearing or sounding awkward or choppy and without fragments or run-ons. Writers must also cite the authority in what is known as parenthetical citations or in-text documentation. Frequently assigned research formats include the Modern Language Association (MLA) and the American Psychology Association (APA).

Models of Embedded Quotations:

Response to Literature (from *Of Mice and Men* - plot summary before quotation)
When Lennie attacked Curley, Curley looked "like a fish on a line"
 with his "fist lost in Lennie's paw" (Steinbeck 75).

Expository (from a nonfiction social studies article)
 In search of her son, Anne DeGraf traveled across
 the Chilkoot Pass with her “feet wrapped in rags” (Kinsella 78).

Expository (from a *Scientific American* psychology article)
While making a mistake destroys “helpless” learners’ self-confidence because they
 “attribute errors to a lack of ability,” students considered “mastery-oriented”
 realize that “slip ups” can be “remedied by more effort” (Dweck 49).

Argumentation (cited from a school’s tardy policy)
 Students late to class are “locked out of class for ten-minutes” (“Tardy”).

Directions for Students:

1. Choose your quotations wisely.
2. Try to limit your selections to less than seven words.
3. Write your Quotation CD on the *Quotation* lines on your T-chart.
4. Think of the lead-in by asking yourself, “What happens in the story or the article right before the quotation I want to use?”
5. Use one of these starter words to begin the lead-in and write it on the *Lead-in* lines on your T-Chart:

After	If
Although	Since
Before	When
Because	While

Remember to choose your quotations (CDs) wisely. They must support your argument. Don’t just drop a quote in your writing out of nowhere!

QUOTING MATERIAL FROM SOURCES

Embedding Quotations

Instructions:

1. Choose your quotations (CDs) wisely. They must support your argument.
2. Don't just drop a quote in your writing out of nowhere! Think of a Lead-in.
 - a. Would this CD be more powerful if I introduce it with the name of the publisher and/or author to add more credibility to the source and my argument?
 - b. Do I need to give my reader an understanding of an event or situation that was taking place?
3. Your goal is to make sure that your audience understands your logic in thinking, so you must place the quotation in your sentence in a manner that helps your audience and furthers your point.

Sample Lead-ins (underlined) that introduce quotations:

1. The tardy policy stipulates that a student late to class will be rounded up in a tardy sweep and “locked out of class for the first ten minutes” (“Tardy”).
2. In a *USA Today* article, reporter Janet Loehrke discusses the obesity epidemic among children caused by poor food choices. According to Loehrke, “[e]xtra pounds put kids at a higher risk of developing Type Two diabetes, high blood pressure, high cholesterol, and other health problems.”
3. Recently, in a brief by the National Governors Association, “a total of 36 states currently have policies that provide school districts and schools with some flexibility for awarding credit to students based on mastery of content and skills as opposed to seat time” (“State Strategies” 1).
4. To briefly review C.G. Jung’s definition of the collective unconscious and archetypes, the collective unconscious is a “second psychic system of a collective, universal, and impersonal nature which is identical in all individuals” (*CW* 9i, para. 90).
5. The young Siddhartha is born into “dharma, the moral order of the world” (Zimmer 14), yielding virtuous men and women who “devote their lives to the fulfillment of the duties and tasks divinely ordained by Dharma” (Zimmer 14).
6. In *Time Magazine*, however, journalist Steve Jones reveals that “47 percent of . . .” (2).
7. If a student reaches three tardies, he or she receives an “automatic detention of thirty minutes” (“Tardy”).
8. A recent *Sports Illustrated* article indicated that the “winning team members of Super Bowl XLV received \$83,000” (Alder 2).
9. In his preface, Momaday discusses the book as a journey and delineates the journey into what he considers “an evocation of three things in particular: a landscape that is incomparable, a time that is gone forever, and the human spirit, which endures” (4).
10. Based on historical records, the probability of either Tituba or her ancestors being from Africa is very slim. Evidence from sources such as Elaine Breslaw’s acclaimed American Series text, *Tituba, Reluctant Witch of Salem*, suggests that “all extant Massachusetts references to [Tituba] clearly specify that she was an American Indian” (12).

T-CHART (2+:1) Embedded Quotations

PROMPT: In a one-chunk paragraph (2+:1), explain the significance of the Hammurabi Code.

TOPIC SENTENCE: Hammurabi's Code was very important.

REVISED TOPIC SENTENCE: _____

CDs	CMs (This is/was important because)... Why?
1st CD: <u>Created in 1760 B.C.E,</u> the Code was one of the "<u>earliest sets of laws</u>" dealing with <u>crimes</u> <u>and punishment</u>. It provided "<u>settlements</u> <u>for common disputes</u>" and "<u>guidelines for</u> <u>citizens' conduct</u>" ("Stele").	
2nd CD: Because "<u>some laws are so basic,</u>" the Hammurabi Code created an understanding that "<u>certain laws</u>" are "<u>beyond the ability of</u> <u>even a king to change</u>" ("Stele").	

COMMENTARY SENTENCE: _____

CONCLUDING SENTENCE: _____

“When Women Rushed for Gold”

Writing Prompt

(2+:1)

Kate Kinsella’s “When Women Rushed for Gold,” is a brief depiction of the roles that some women played in the late 1800s during the Alaskan Gold Rush. Read the passage carefully. Then, in a well-written one-chunk paragraph (2+:1), explore the accomplishments of one woman during the Alaskan Gold Rush.

“When Women Rushed for Gold”
By Kate Kinsella

- [1] In the late 1800s, the United States was in an economic depression. People lost their jobs and went hungry. When the cry of “Gold!” came from the Far North, many needed little urging to pack up what they did have and head north. This movement became known as the “gold rush.”
- [2] The Yukon was seen as a man’s world. Although the westward journeys of the pioneers were difficult, many families made new beginnings. The rush north was different. Travelers often had to carry everything they had on their backs. They had to cross raging streams and travel through treacherous mountain passes. They suffered through extremely cold winters and lived through times when they had little to eat. Women were generally considered neither as strong nor as resourceful as men. The view at the time was that women needed to be protected from the harshness of life.
- [3] Even so, about one of every ten people who made the difficult trip to Alaska and the Yukon was a woman. Women went for many of the same reasons men went—to find gold, to make a fortune, to find adventure. Some professional women wrote for newspapers, taught, or sold insurance. Any woman who could make a homesick miner a good meal or do his laundry could make plenty of money. Many women also went north with husbands who hoped to strike it rich. They came from all over the world. They helped write the history of land filled with hardship, wealth, hope and struggle.
- [4] In 1894, Anne DeGraf set out for the Yukon. She was searching for her son, who had followed the lure of gold. The fifty-five-year-old woman traveled across the Chilkoot Pass in early spring. With her feet wrapped in rags, she walked with the aid of a crutch. “We had to climb over and around jagged rocks, sometimes jumping from one to another like mountain goats,” she wrote in her diary.
- [5] DeGraf took her sewing machine so that she would be able to make her living while she looked for her son. She journeyed 800 miles down the Yukon River, asking about her son at settlements along the way. She made clothing for the miners and sewed tents. When she finally decided to give up and go back home, she sold her sewing machine and took her earnings home. She had \$1,200 in gold dust. During the next 20 years, she traveled repeatedly to the North, searching for her son. She died at the age of ninety-one in San Francisco without ever finding him.
- [6] Some women went north to look for gold themselves. In 1874, Nellie Cashman began prospecting for

gold. Prospecting was difficult for a woman. Some men refused to follow a woman's orders. Cashman, though, never seemed bothered by the attitudes she found and continued prospecting for gold. By winter of that year, she had returned to British Columbia. When she heard stories of prospectors trapped farther north in the old fields, starving in the brutal weather, she organized a rescue party and led it back into the mountains. The food the rescuers carried saved the miners' lives.

- [7] Many women saw opportunities to make a living serving the needs of the miners. Harriet Pullen went north to Skagway, Alaska, in 1897. She didn't know anyone—but she did know that she could find opportunities to make money. Pullen found work as a cook and soon realized that many miners missed the taste of home. She used dried apples to make pies, which the miners coveted. Realizing that she could make money transporting the miners and their supplies, Pullen started a company. She became wealthy and began converting one of the grandest private homes in Skagway into the Pullen house, one of Alaska's finest hotels.
- [8] Some Native American women who grew up in the Far North got caught up in the gold rush as miners and hangers-on swarmed over the land where gold had been discovered. One woman, named Sinrock Mary, was the daughter of a Russian trader and an Inupiat woman. After her husband died, she won the right to own half of the couple's 500 reindeer. Miners were desperate for her reindeer, both for transportation and for food.
- [9] In 1900, a group of miners followed her. They shot at her herd to scatter it and even offered her marriage and money. She refused and kept the herd together. When she sold her animals for meat, it was on her terms. She became the richest Native American woman in the North. Sinrock Mary adopted several children who became reindeer herders themselves. Then she married another Inupiat man. She was known among her people for being smart as well as generous with her time and money.
- [10] The women of the Yukon braved terrible conditions and sometimes loneliness and heartache to build lives for themselves in a difficult land. The women who went north with the gold rush did what they could to survive and prosper.

Kinsella, Kate. "Lesson 15: When Women Rushed for Gold." Language Arts: Reading Strategies.

Upper Saddle River, New Jersey: Globe Fearon, 2001. 150-151.

THE LESSON | ANNOTATING AS YOU READ

When we “annotate” for the Jane Schaffer Writing Program, we use our red and green colors. Depending on what the prompt or the teacher asks you to do, use your red pen to underline relevant **concrete details**. Use your green pen to explain or analyze the importance of those details.

As you know, we have a prompt to guide our reading, so we will underline **concrete details** in red that fit our prompt. Since we will use quotations for our **concrete details** in this response, we will put quotation marks around what we underline.

We will also write some **commentary** ideas in green to show the significance of the underlined **concrete details** and our ideas about why we chose to underline them. *What do they show? Why are they important ideas for our paragraph?*

Below, we are providing you with an annotated model of the highlighted section of the passage. Remember, our annotations fit our prompt.

TS

In 1894, **Anne DeGraf** set out for the Yukon. She was searching **elderly, older, more fragile** for her son, who had followed the lure of gold. The **fifty-five-year-old** **woman** traveled across the **Chilkoot Pass** in early spring. With her **risk-taker** **not in good shape** **wobbly, unstable** **“feet wrapped in rags,”** she walked with the **“aid of a crutch.”** “We had **... dangerous terrain** to **‘climb over and around jagged rocks,’** sometimes jumping from one to another like mountain goats,” she wrote in her diary. **Resourceful, forethought, planning, entrepreneurial** DeGraf took her **sewing machine** so that she would be able to **endurance** make her living while she looked for her son. She journeyed **“800** **treacherous** **miles down the Yukon River,”** asking about her son at settlements **found a professional niche** along the way. She **“made clothing for the miners and sewed tents.”** When she finally decided to give up and go back home, she sold her **Self-sufficient; business savvy** sewing machine and took her earnings home. She had **“\$1,200 in gold** **determined, persistent** **dust.”** During the next 20 years, she **“traveled repeatedly”** to the North, searching for her son. She died at the age of ninety-one in San Francisco without ever finding him.

GATHERING CDS (2+:1)

PROMPT: In a well-written one-chunk paragraph (2+:1),

1. Think of 5 or more possible concrete details (CDs) that would fit the prompt and write them below.
2. Circle the 2 or more that fit the assignment best.
3. Decide the best order and write CD1 in red next to the first one and CD2 in red next to the second one.

THE GRADUAL RELEASE MODEL WITH JSWP

1.	Modeling “I Do It.”	➤ The Teacher: Provides direct instruction; establishes goals and purpose; models desired outcomes; utilizes the “Think Aloud” teaching strategy* ➤ The Students: Actively listen; take notes, ask questions for clarification ➤ Equipment and Materials: ○ hard graphic organizers and pens for each student and teacher (students copy as teacher presents each step and the thinking behind each step) ○ hard copy of the model from start to finish for students who need assistance ○ dry erase board, interactive whiteboard, document camera, chalkboard ○ if digital, use JSWP Google Docs, JSWP App, Bring Your Own Device (BYOD), laptop ➤ Formative Assessment Suggestions: ○ develops a clear personal model on paper or digitally ○ on-task behavior, focus ○ asking questions, clarification ○ color-coding correctly ○ correct grammar, mechanics, usage *“Think Aloud” ○ Verbalize your thinking—make it visible—as you simultaneously teach a lesson. (Stream-of-Consciousness, information processing) ○ “Think Aloud” through the JSWP process while completing each step with fidelity.
2.	Guided Instruction “We Do It.”	➤ The Teacher: Provides interactive instruction; works with students; checks, prompts, gives clues; provides additional modeling; meets with needs-based groups; asks and responds to questions. ➤ The Students: Interact with teacher and classmates; complete process with and alongside others, provide input to lesson ➤ Equipment and Materials: hard copies or digital graphic organizers; pens ➤ Formative Assessment Suggestions: ○ Everyone offers two comments for each part of the process through the final draft. ○ Proper graphic organizers and colors are used. ○ Group processing after each step in the process: “reflecting on the group’s work to clarify and improve the effectiveness of the members in working together to achieve the group’s goals by (a) describing which member actions were helpful and unhelpful and (b) making decisions about what actions to continue or change” (Johnson, et al.). ○ Everyone submits entire process (after each step).
3.	Paired Work “You Do It Together.”	➤ The Teacher: Moves among pairs; clarifies confusion; provides support ➤ The Students: Work with classmates; collaborate on authentic task; consolidate learning; complete process in pairs; look to peers for clarification ➤ Promotive Interaction Suggestions: “Students promote each other’s learning by helping, sharing, and encouraging efforts to learn. Students explain, discuss, and teach what they know to classmates. Teachers structure the groups so that students sit knee-to-knee and talk through each aspect of the assignment” (Johnson, Johnson, & Holubec). ➤ Formative Assessment Suggestions: Combining individual accountability with positive interdependence ○ Content – Individual accountability ▪ Each member contributes and initials CDs separately; then the pair decides the best one(s) that fit the prompt ▪ Each member contributes and initials CMs separately; then the pair creates sentences together ▪ Member 1 writes TS; Member 2 writes CS; then the pair confers and confirms ○ Each member self-evaluates (positive comments; critique for improvement)
4.	Independent Work “You Do It Alone.”	➤ The Teacher: Provides feedback; evaluates student work; determines level of understanding; provides interventions as appropriate ➤ The Students: Work alone; rely on notes, activities, classroom and personal models to complete the assignment ➤ Formative and Summative Assessment Suggestions: Provide the appropriate rubric along with the prompt to the students before the process begins; score with the rubric(s) as your guide; display completed assignments

“When Women Rushed for Gold”

Writing Prompt

(2+:1)

Kate Kinsella’s “When Women Rushed for Gold,” is a brief depiction of the roles that some women played in the late 1800s during the Alaskan Gold Rush. Read the passage carefully. Then, in a well-written two-chunk paragraph (2+:1), explore the accomplishments of one woman during the Alaskan Gold Rush.

GATHERING CDS TWO CHUNKS (2+:1)

PROMPT: In a well-written two-chunk paragraph (2+:1), explore the accomplishments of one woman
during the Alaskan Gold Rush.

1. Think of 5 or more possible concrete details (CDs) that would fit in each chunk and write them below.
2. Circle the 2 for each chunk that fit the assignment best.
3. Decide the best order and write CD1 in red next to the first one and CD2 in red next to the second one for each chunk.

FIRST CHUNK

SECTION 4 THE ESSAY

**THE LESSON | DEVELOPING AN EFFECTIVE THESIS STATEMENT**

Prompt: **Cold and flu season** arrives each year, and all of us have experienced the misery of being sick. To increase your chances of **staying healthy** during this time, you can take actions. Reflect on behaviors your parents, teachers, and health professionals have taught you can prevent illness. Then, in a well-organized, multi-paragraph expository essay, **discuss some effective advice you learned on staying healthy during the cold and flu season.**

1. Name the subject of the essay. Usually, you will find it repeated in the prompt as a word or a phrase.

SUBJECT OF THE ESSAY

My Answer: **staying healthy during the cold and flu season**

2. Remind yourself of the task from the prompt. What is it requiring you to do?

TASK(S)

My Answer: I must . . . **discuss some effective advice I learned on staying healthy during the cold and flu season.**

3. Answer the prompt's task by giving an explanation.
- This explanation could be from what you learned through your reading or studying of the topic.
 - This explanation could also require you to take a position or form an opinion from your own reasoning skills.
 - This explanation could be a combination of both "a" and "b."
 - The task in the prompt will guide you in determining whether the explanation you choose is "a" or "b" or "c." For this reason, the task is quite important to understand.

MY EXPLANATION

My Answer: **making wise choices about health helps everyone**

THESIS STATEMENT = SUBJECT + EXPLANATION

SUBJECT: **staying healthy during the cold and flu season**

EXPLANATION: **making wise choices about health helps everyone**

THESIS STATEMENT: **Making wise choices during the cold and flu season leads to better health for all.**

THESIS STATEMENT = SUBJECT + EXPLANATION**Flip the Prompt Thesis (Beginners):**

This is a fill-in-the-blank template for those students who need it.

In _____,
 (Author's Name) ("Title") (Subject)
 _____.
 (My Explanation)

EXAMPLE: *In Kate Kinsella's "When Women Rushed for Gold," two women during the Alaskan Gold Rush are known for their accomplishments.*

Flip the Prompt Framed Thesis (Beginners)

- SUBJECT: two women from the Alaskan Gold Rush during the 1800s (from the prompt)
- IDENTIFY THOSE TWO WOMEN: Anne DeGraf and Sinrock Mary (from the written body paragraphs—in the same order as the paragraphs)
- EXPLANATION: were accomplished women (from the prompt)
- EXAMPLE: *Anne DeGraf and Sinrock Mary were accomplished women of the Alaskan Gold Rush during the 1800s.*

Flip the Prompt Framed Thesis (Intermediate)

- SUBJECT: two women from the Alaskan Gold Rush
- IDENTIFY THOSE TWO WOMEN: Anne DeGraf and Sinrock Mary
- EXPLANATION: were accomplished women
- COMMENTARY: that made them honorable women (unused commentary from T-Chart)
- EXAMPLE: *Anne DeGraf and Sinrock Mary, women of the Alaskan Gold Rush during the 1800s, achieved accomplishments that made them honorable women.*

Open Thesis (Advanced)

- SUBJECT: Women pioneers during the Alaskan Gold Rush of the 1800s (combination of important details from the prompt that sets the stage for the essay; and unused commentary from T-Chart)
- EXPLANATION: were at a disadvantage but were able to make great gains and find success [combination of (1) close reading and inferencing from the passage; (2) remaining commentary from the T-Chart; (3) ideas from "Discovering Theme" activity; (4) the writer's thoughts, knowledge, experience, and "wiggle"]
- EXAMPLE: *During the Alaskan Gold Rush of the 1800s, women pioneers were at a disadvantage but were able to make great gains and find success.*

Building an Introduction for the Expository Essay

General Information: The purpose of an introduction, as well as the title of an essay, is to engage the reader from the beginning. A good rule of thumb is to estimate that 10% of your essay belongs to the introduction. So if your teacher asks you for a 5-page essay, then a half of a page should go toward the intro. If the teacher asks you for a 1500-word essay, then estimate about 150 words toward the intro. If the teacher asks for a 15-page document, then about 1.5 pages will go to the intro. In the first and second cases, and in the majority of timed writings, a good idea is to place the thesis statement as the last sentence of your introductory paragraph. In the third case, with an introduction that extends to almost two pages, the thesis statement will usually appear in the intro but probably not in the first paragraph. Granted, different instructors have different rules, so pay attention to their guidelines.

Options for How to Begin:

- Historical background or significance of the topic
- A current event that has prompted a discussion of the topic
- A quotation related to the topic
- A question or problem related to the topic
- A dramatic or startling incident, statement, statistic, or fact related to the topic

- Start by capturing your reader's attention with interesting observations about the topic without naming the topic itself.
- See how the top of the pyramid is broad? This means to begin your introduction with broad statements about the topic.

End with a Thesis Statement:

- One complete sentence
- The thesis answers this question: What is the purpose of this essay? What am I asserting? What am I writing about?
- Two options:
 - Framed thesis for beginning writers: Name the topic of each paragraph in the thesis.
 - Open thesis for developing writers: do not name the topics of each paragraph
- For master writers a thesis statement is a compound-complex thought and, therefore, needs a compound-complex sentence (*ala Sharon Kingston*).

YOUR PRACTICE

Create an expanded introduction for your essay by following these directions:

Begin by writing your Open or Framed thesis in Section 3 below. Next, decide which of the ideas for completing Sections 1 and 2, recapped below, works best for you:

- 1. Use the CM helpers on the left of the graphic organizer to complete the introduction.
- 2. Use extra commentary words or phrases from your T-Charts.
- 3. Use the WOW sheet with a big idea in the middle.
- 4. Use a combination of these choices or all of them.

CM Helpers	My Introductory Sentences
Section 1 (In this essay, I want my reader to realize that . . .) Think about the importance of this topic and/or the life lesson you are providing the world!	
Section 2 Say more about Section 1. (and) . . . (because) . . . (and) . . . (because) . . .	
Section 3 Write your open or framed thesis statement.	

DISCOVERING "BIG IDEAS"

Fill in the blank as many times as you have thoughts:

Step 1:

(title) _____

is a life lesson about

Step 2: List subjects; abstract nouns.

Step 3:

(author) _____ would say that
(subject) _____

Step 4:

(author) _____ would say that
(subject) _____

Step 5: Cross out the top line; capitalize the first letter of the subject. You now have a thematic statement.

THE INTRODUCTION

Starts with a Perspective
Ends with the Thesis

CM Helpers	My Introductory Sentences
Section 1 (In this essay, I want my reader to realize that . . .) Think about the importance of this topic and/or the life lesson you are providing the world!	
Section 2 Say more about Section 1. (and) . . . (because) . . . (and) . . . (because) . . .	
Section 3 Write your open or framed thesis statement.	

[illegible]

INTRODUCTION CHOICES
Framed Thesis

1 SENTENCE Thesis Statement Only	2 SENTENCES One sentence about the topic + Thesis Statement	3 SENTENCES One sentence about the topic + One sentence that says more + Thesis Statement
Anne DeGraf and Sinrock Mary were accomplished women of the Alaskan Gold Rush during the 1800s.	As America was taking shape, some women persevered to be successful, no matter what was at stake for them. In Kate Kinsella’s “When Women Rushed for Gold,” Anne DeGraf and Sinrock Mary were accomplished women of the Alaskan Gold Rush during the 1800s.	A woman’s strength or intelligence was not acknowledged during the early years of America’s development. However, in Kate Kinsella’s “When Women Rushed for Gold,” many women became famous for their perseverance and their resulting contributions to society. Anne DeGraf and Sinrock Mary were accomplished women of the Alaskan Gold Rush during the 1800s.

INTRODUCTION CHOICES
Open Thesis

1 SENTENCE Thesis Statement Only	2 SENTENCES One sentence about the topic + Thesis Statement	3 SENTENCES One sentence about the topic + One sentence that says more + Thesis Statement
During the Alaskan Gold Rush of the 1800s, women pioneers were at a disadvantage but were able to make great gains and find success.	Overcoming challenges can lead to achieving a goal. In “When Women Rushed for Gold,” author Kate Kinsella shares how women pioneers during the Alaskan Gold Rush of the 1800s were at a disadvantage but were able to make great gains and find success.	Overcoming challenges can lead to achieving a goal. Kate Kinsella’s “When Women Rushed for Gold,” illustrates how women conquered challenges that played an important role in new beginnings. During the Alaskan Gold Rush of the 1800s, women pioneers were at a disadvantage but were able to make great gains and find success.

The Conclusion for the Expository Essay

The purpose of a conclusion is threefold:

- 1) to reflect on the major points of the essay without renaming them or adding new information;
- 2) to provide a finished feeling to the essay; and
- 3) to leave your reader thinking about your idea(s) and even wanting to find and read more writing by you!

For academic essays, a good rule of thumb is to estimate that 10% of your essay belongs to the conclusion.

Options for How to End:

- Draw a deduction from the facts
- Reflect on the significance of this topic
- A quotation related to the topic
- A prediction

- Start by restating your thesis statement – do not repeat it; restate the idea or purpose of the essay
- Gradually move from the narrowness of the topic to the significance of the topic -- broader view

Restate the Purpose of your Essay
WITHOUT REPEATING THE THESIS

The gift is your essay...
... the bow is your conclusion

YOUR PRACTICE

Write an expanded conclusion for your essay.

Begin by writing your one-sentence re-statement of your thesis in the Section 1 box. Then, decide which of the ideas for completing Sections 2 and 3, recapped below, works best for you:

- 1. Use the CM helpers on the left of the graphic organizer to complete the conclusion.
- 2. Use extra commentary words and phrases from your T-Charts.
- 3. Use the extra words or phrases from the Introduction's WOW sheet with a big idea in the middle.
- 4. Use a combination of these choices or all of them.

CM Helpers	My Concluding Sentences
Section 1 (In this essay, I want my reader to understand . . .) Your purpose for writing this essay Restate the thesis without repeating it; use synonyms.	
Section 2 Say more about Section 1. No New Details REFLECTIVE	
Section 3 THE BIG PICTURE	

THE CONCLUSION
GIVES A FINISHED FEELING TO YOUR ESSAY

CM Helpers	My Concluding Sentences
Section 1 (In this essay, I want my reader to understand . . .) Your purpose for writing this essay Restate the thesis without repeating it; use synonyms.	
Section 2 Say more about Section 1. No New Details REFLECTIVE	
Section 3 THE BIG PICTURE	

[illegible]

CONCLUSION CHOICES
Framed Restatement of Thesis

1 SENTENCE Restatement of the thesis statement	2 SENTENCES Restatement of the thesis statement + The big picture	3 SENTENCES Restatement of the thesis statement + More about sentence 1 + The big picture
Both Sinrock Mary and Anne DeGraf proved that women can be successful in a man’s world.	Both Sinrock Mary and Anne DeGraf proved that women can be successful in a man’s world. When determined to succeed, any of us can conquer the challenges that might stand in our way.	Both Sinrock Mary and Anne DeGraf proved that women can be successful in a man’s world. They both persevered through many hardships. When determined to succeed, any of us can conquer the challenges that might stand in our way.

CONCLUSION CHOICES
Open Restatement of Thesis

1 SENTENCE Restatement of Thesis Statement	2 SENTENCES One sentence about the topic + Thesis Statement	3 SENTENCES One sentence about the topic + One sentence that says more + Thesis Statement
Women pioneers struggled to make great gains and successes during the Alaskan Gold Rush of the 1800s.	Women pioneers struggled to make great gains and successes during the Alaskan Gold Rush of the 1800s. The women of the Alaskan Gold Rush continue to set examples for women of today.	Women pioneers struggled to make great gains and successes during the Alaskan Gold Rush of the 1800s. They persevered through hardships. The women of the Alaskan Gold Rush continue to set examples for women of today.

SECTION 5

DESIGNING AND DECODING PROMPTS

THE LESSON | DECODING THE PROMPT

Anytime a writer is given a prompt s/he must spend time decoding the prompt to activate thinking and to understand the task.

Begin the decoding process by reading the sample prompt.

Prompt: Cold and flu season arrives each year, and all of us have experienced the misery of being sick. To increase your chances of staying healthy during this time, there are actions you can take. Reflect on behaviors your parents, teachers, and health professionals have taught you to prevent illness. Then, in a one-chunk expository paragraph (2+:1), explain effective advice on staying healthy during the cold season.

Sometimes prompts are written in three parts, such as the one above.

Here is the same prompt divided into three parts.

- Part 1: Cold and flu season arrives each year, and all of us have experienced the misery of being sick. To increase your chances of staying healthy during this time, there are actions you can take.
- Part 2: Reflect on behaviors your parents, teachers, and health professionals have taught you to prevent illness.
- Part 3: Then, in a one-chunk expository paragraph (2+:1), explain effective advice on staying healthy during the cold season.

THE GIST:

1. Step 1 in the writing process is _____ .
2. Sometimes prompts are written in _____ parts.

Aha!

Another idea I learned from this lesson is _____

Here is the prompt again with the parts numbered.

- **Part 1 – Background Sentence(s):** Cold and flu season arrives each year, and all of us have experienced the misery of being sick. To increase your chances of staying healthy during this time, there are actions you can take.
- **Part 2 – Trigger Sentence:** Reflect on behaviors your parents, teachers, and health professionals have taught you to prevent illness.
- **Part 3 – The Task(s):** Then, in a one-chunk expository paragraph (2+:1), explain effective advice on staying healthy during the cold season.

Background sentences set the stage for writing. They inform the writer about the topic or theme or ideas on which s/he will be writing. The prompt might include a couple background sentences or many depending on the assignment.

The trigger sentence prepares the writer for the task and alerts the writer as to where s/he can look to gather concrete details.

The task is the specific writing assignment. In a clearly written task, a writer is given how long the response should be, in what mode, and a clear verb which guides the writer's thinking. Sometimes, as in previous examples in this guide, the entire prompt is made up of only the task.

THE GIST:

1. When a prompt is written in three parts, those parts are 1) _____
2) _____ and 3) _____.
2. The background sentences inform the writer about the _____ or
_____ or _____ on which s/he will be writing.
3. The trigger sentence's purpose is to prepare the writer for the task and alert the writer where
_____.
4. The task is the specific _____.

Aha!

Another idea I learned from this lesson is _____

Below we are providing the same sample prompt again.

Prompt: Cold and flu season arrives each year, and all of us have experienced the misery of being sick. To increase your chances of staying healthy during this time, you can take actions. Reflect on behaviors your parents, teachers, and health professionals have taught you can prevent illness. Then, in a one-chunk expository paragraph (2+:1), discuss some effective advice you learned on staying healthy during the cold and flu season.

Review the definitions of the parts a good writing prompt:

- **Background sentences** set the stage for writing. They inform the writer about the topic or theme or ideas on which s/he will be writing. The prompt might include a couple background sentences or many depending on the assignment.
- The **trigger sentence** prepares the writer for the task and alerts the writer as to where s/he can look to gather concrete details.
- The **task** is the specific writing assignment. In a clearly written task, a writer is given how long the response should be, in what mode, and a clear verb which guides the writer's thinking. Sometimes, as in previous examples in this guide, the entire prompt is made up of only the task.

Take time to analyze the prompt.

1. Background sentences

- a. Cold and flu season set the stage.
- b. Topic of the paragraph: actions for staying healthy

2. Trigger sentence

- a. The writer will look for his/her concrete details by reflecting on the advice s/he has learned from parents, teachers, and health professionals.

3. Task:

- a. The advice from parents, teachers, and health professionals will make up the 2+ sentences of concrete details.
- b. Since the task states the chunk is 2+:1, the writer realizes s/he needs a sentence of commentary. The prompt states to "discuss some effective advice." "Discuss" and "effective" point to commentary. After the writer gives "advice" s/he must "discuss" why it is effective advice.
- c. Also, the writer has just been asked to write a one-chunk paragraph; therefore, s/he must limit what advice is included. All effective advice cannot fit in a paragraph. The writer keeps the length of the assignment in mind throughout the process.

THE GIST:

Take time to _____.

Aha!

Another idea I learned from this lesson is _____

Even if a prompt is not written in the Jane Schaffer Writing Program format, a writer can still analyze the prompt by following these steps:

- 1. Identify the topic.
- 2. Ask yourself, "Where will I find the concrete details?"
- 3. Know the mode (type) of discourse (Argumentation, Expository, Narrative, Response to Literature).
- 4. Know the length of the assignment (short response, a paragraph, an essay).
- 5. If the writer is asked to write an expository text, an argument, or a personal narrative, remember the ratio is (2+:1). If the writer is asked to write a literary analysis, the ratio is (1:2+), and all of these ratios are discussed in other workbooks.
- 6. Determine if the prompt indicates commentary. These are just a few verbs and phrases in a prompt that point to commentary:

analyze	discuss	give your opinion	consider the importance	defend	evaluate
---------	---------	-------------------	-------------------------	--------	----------

THE GIST:

- 1. When analyzing the prompt, one question a writer might ask is "Where will I find the _____?"
- 2. If the writer is asked to write an expository text, an argument, or a personal narrative, remember the ratio is _____.

Aha!

Another idea I learned from this lesson is _____

**YOUR PRACTICE**

Read the following sample prompt and then show your understanding of the three parts of a good prompt by writing those parts next to the label.

Prompt: The human body is an amazing machine. Like all machines, it requires upkeep in order for it to run effectively. Each of us has been gifted one body that carries us through our lives. Watch the short video about healthy living. Then, in a one-chunk expository paragraph (2+:1), explain the impact of a few actions you can take to keep your body healthy.

Background sentences:

Trigger:

Task:

Answer the following questions about the sample prompt on this page.

1. How many chunks will this paragraph be?
2. In what mode of writing will this paragraph be written?
3. How many sentences of concrete details will be in this paragraph?
4. How many commentary sentences will be in this paragraph?
5. Where will the concrete details come from?
6. Which words from the prompt state what the concrete details will be about?
7. Which words indicate the focus of the commentary?

WRITING SUMMARIES

Topic Sentences and Concluding Sentences

The prompt is key to receiving effective summaries from your students. Like all good prompts it should be

- written as a statement;
- clear as to the length and/or scope; and
- narrowly focused.

Poorly focused - Write a one-chunk (3+:0) paragraph that summarizes the article “It’s a Math World for Animals.”

Narrowly focused - Write a one-chunk (3+:0) paragraph that summarizes how a dog seems to do calculus in “It’s a Math World for Animals.”

A well written, narrowly focused prompt will point the way to the topic sentence for a summary. The struggling student may use part of the prompt in the topic sentence. There does not need to be commentary in the topic sentence unless the teacher desires one.

In the article “It’s a Math World for Animals,” a dog appears to do a form of calculus.

A summary can be quite satisfactory without a traditional Schaffer concluding sentence, which stipulates commentary. If you want commentary in your students' concluding sentences, then your prompt must clearly make that point.

Sample Summary Prompt with Concluding Sentence

Write a one-chunk (3+:0) paragraph that summarizes how a dog seems to do calculus in "It's a Math World for Animals." For your concluding sentence, evaluate* whether this is really math.

Suggestion: As demonstrated in the above prompt, your final instructions for the concluding sentence might contain one of these opening trigger words:

- Predict - Predict what will happen next
- Connect - Connect personally with the reading
- Infer - Infer meaning from the facts
- Clarify - Clarify the meaning or results
- Evaluate - Evaluate the material; form an opinion*

Note: A "paragraph," by definition, has a topic sentence and a concluding sentence. Teachers, if you do not want a concluding sentence, do not call the writing activity a paragraph; call it a short answer. If, however, you do want a paragraph, we recommend that you include in your prompt what you expect for your concluding sentence in order not to receive banal responses, such as, "That is what I learned today..." Also, remember that a concluding sentence is one statement; do not prompt them to write in a CS more than what can be provided in one single sentence.

Summary Prompt Writing Practice

TEMPLATE FOR A SUMMARY PROMPT

With a Concluding Sentence

Suggestions for Concluding Sentence Instructions:

- Predict - Predict what will happen next.
- Connect - Connect personally with the reading.
- Infer - Infer meaning from the facts.
- Clarify - Clarify the meaning or results.
- Evaluate - Evaluate the material; form an opinion.

Write a one-chunk (3+:0) paragraph that summarizes _____

_____. For your concluding sentence, _____
_____.

TEMPLATE FOR A SUMMARY PROMPT

Without a Concluding Sentence

Write a one-chunk (3+:0) response that summarizes _____

_____.

PROMPT WRITING PRACTICE

1. Features of good prompts:
 - a. written as statements, not questions
 - b. quantifies the assignment (length and ratio)
 - c. uses a verb that fits your subject and the assignment (e.g., discusses, comments on, explores, analyzes, interprets, evaluates, investigates, describes, explains, states, defines, summarizes)
 - d. narrows the focus of the topic

2. Write a _____ that _____

_____.

3. Write a _____ that _____

_____.

4. Write a _____ that _____

_____.

Writing Prompts

Instructions: Write prompts with the following ingredients:

- 1-3 background sentences that start the students thinking (occasion)
- A trigger sentence or stem (Read the passage carefully. Write a well-developed essay that...)
- Name the purpose for writing – some common verbs
 - Argumentation
 - * defends, challenges, qualifies
 - * convinces
 - * argues for or against
 - * persuades
 - * agrees or disagrees
 - * evaluates
 - Expository/Informational
 - * explains
 - * analyzes
 - * describes
 - * compares/contrasts
 - * comments on
 - * explores
 - * classifies
 - * categorizes
 - * investigates
 - * summarizes
 - * defines (e.g. Define what “success” means to you.)
 - Narrative
 - * tells a story
- Audience
 - Scientist
 - William Shakespeare
 - School Board President
 - Mayor
 - Historian
 - Engineer
 - Physicist
 - Musician
 - Art Historian
 - Peer who speaks a different language
 - Philosopher
 - Psychologist
 - Young adult fiction (for fictional narrative)
- Length (# of paragraphs, words, pages – typed or handwritten)
- Scope (chunks in paragraphs / ratio)
- Expectations

Note: When we say “short answer” in Jane Schaffer®, we expect students to write in complete sentences. Our definition, however, does not mean that all “short answers” are in complete sentences. That distinction depends on the field of study and the purpose of the assignment. Sometimes a short answer is simply that and may be one or two word answers or a bulleted list. Please clarify for your course of study so as not to confuse the students.

Chapter 1: Biology in the 21st Century

1.1 The Study of Life

Writing Prompt

Biologists study life in all its forms. Read 1.1 “The Study of Life.” Then, write a one-chunk (3+:0) summary response that summarizes the (4) characteristics that all living things share. A concluding sentence is not required.

TS: All organisms share certain characteristics.

CD1: All organisms are made up of one or more cells.

- A cell is the basic unit of life.

CD2: All organisms need a source of energy for their life processes.

- The form of energy used by all living things is chemical energy.

CD3: All organisms must react to their environment to survive.

- Light, temperature, and touch are just a few of the physical factors, called stimuli, to which organisms must respond.

CD4: Members of a species must have the ability to produce new individuals, reproduce.

- When organisms reproduce, they pass their genetic material to their offspring.
In all organisms, the genetic material is a molecule called deoxyribonucleic acid, or DNA.

All organisms share certain characteristics. All are made up of one or more cells, the basic unit of life. All need a source of energy for their life processes, and the form of energy used by all living things is chemical energy. All must react to their environment to survive, including light, temperature, and touch. These are just a few of the physical and environmental factors, called stimuli, to which organisms must respond. All members of a species must have the ability to produce new individuals, or reproduce. When organisms reproduce, they pass their genetic material, a molecule called deoxyribonucleic acid, or DNA, to their offspring.

1.3 Scientific Thinking and Processes

Writing Prompt

Science is a way of thinking, questioning, and gathering evidence. Read 1.3 “Scientific Thinking and Processes.” Then, write a one-chunk (3+:0) summary response that identifies the (5) different elements of scientific inquiry. A concluding sentence is not required.

1.4 Biologists’ Tools and Technology

Writing Prompt

Technology continually changes the way biologists work. Read 1.4 “Biologists’ Tools and Technology.” Then, write a two-chunk (3+:0) summary response that describes the usefulness of (2) modern imaging technologies. A concluding sentence is not required.

Content Topics Semester 1

Absolutism

Paragraph (Essay) prompt:

1. The philosophy of an absolutist government is that the King, by divine right, controls every aspect of life (social, economic, and political power), resulting in both kind, benevolent rulers and vicious, murderous tyrants. Read carefully the section in your text book entitled "Absolutism in Europe" (Beck, et. al 160-61). Then, in a one-chunk paragraph (2+:1), describe the reasons for the rise of absolute monarchy. *
2. Absolutism began in a time of political uncertainty and religious conflict. Many monarchs took this opportunity to seize more power and to make changes that they felt would benefit their people as well as themselves. Read carefully the section about absolutism. Then, in a one-chunk (2+:1) paragraph, choose an absolute monarch and discuss the steps he/she took to consolidate his/her power and help his/her people. Be sure that your concluding sentence puts these changes in historical context (what happened as a result of the changes you mention?)

* We addressed this prompt from three different perspectives: ruler, social conditions, and subjects.

Short Answer Prompts (one chunk, 2+:1):

1. From your readings and class discussions, provide a short answer response about how the "Golden Age" of Spanish art and literature reflects the attitudes of the time.
2. From the material you have read and discussions in class, provide a short answer response that explains how the Peace of Westphalia addresses the causes of the Thirty Years' War.

Enlightenment

Paragraph (Essay) Prompts:

1. Thomas Hobbes and John Locke are perhaps the two best known British philosophers of the Enlightenment. Both experience the English Civil War but their vastly different experiences led them to different conclusions about the nature of man. Think about what you have learned about these two philosophers. Then, in a two-chunk (2+:1) paragraph, contrast their experiences in the war and their conclusions about human nature. Be sure that your concluding sentence puts these differences in historical context (what happened as a result of the differences you mention?)
2. A major part of the Enlightenment was the written expression of ideas which allowed new opinions to be shared, debated, and put into practice. Using evidence from the given document **, in a one-chunk (3+:0) paragraph, summarize the ideas presented

by the Enlightenment philosopher**. Use your concluding sentence to comment on how these ideas represent a major concept and/or ideal of the Enlightenment.

3. The Enlightenment left a legacy of belief and progress, individualism, and secularism, which would lead to radical changes and reactions among people of all social classes. Using evidence from the *United States of America Declaration of Independent and/or the Preamble of the United States of America Constitution*, write a one-chunk (2+:1) paragraph explaining how the document(s) is/are representative of major concepts and/or ideals of the Enlightenment.

** We practiced this several times with documents written by Rousseau, Montesquieu, Beccaria, Locke, and Hobbes.

Short Answer Prompts (2+:1):

1. From your readings and class discussions, explain how the Scientific Revolution affected people's approach to solving problems with government and society.
2. Choose one of the Enlightenment philosophers we studied (Hobbes, Locke, Voltaire, Montesquieu, Rousseau, or Beccaria) and explain how this philosopher's ideas represent the Enlightenment movement.
3. Choose either Joseph II of Austria or Frederick II of Prussia and explain how this monarch represents both of the civic/social concepts we have studied (Absolutism and Enlightenment).

Prompts are also being developed for the following first semester content topics:

French Revolution

Conservative and Liberal Reactions

Industrial Revolution

Imperialism

Note: We typically use the paragraphs to develop and measure students' growth in skills (formal writing - with and without embedded quotations, summarization and paraphrasing, and document interpretation so far) while we use the short answer questions to develop and test students' content knowledge.

GLOSSARY

THE JANE SCHAFFER® CHANTS		
TOPIC SENTENCE (TS)	Teacher Call-out: “Who or What Am I Writing About?” Student Response: “Topic Sentence, Blue Pen, Write My Answer Out!”	
CONCRETE DETAIL (CD)	Concrete Detail Comes from Four Places (Big Clap): ▪ What I have READ; ▪ What I have SEEN; ▪ What I or someone else has DONE; ▪ What I or someone else has SAID.	
COMMENTARY (CM)	Commentary Comes from Three Places (Big Clap):	
	Elementary ○ My HEAD, ○ My HEART, ○ My STOMACH, ○ . . . and A Little Wiggle!	Secondary ○ My Analytical Mind, ○ My Heart and Soul, ○ My Gut, Instincts, and Intuition, ○ . . . and A Little Wiggle!
CONCLUDING SENTENCE (CS)	Teacher Call-out: “Concluding Sentence, Blue Pen, Get Your Mirror Out!” Student Response: “Reflect and Connect (Big Clap); Give ‘em Stuff to Think About!”	

PARTS OF A PARAGRAPH AND THE JANE SCHAFER® CHUNKING TECHNIQUE

1.	INDENTING	Indent each paragraph (one tab). Indenting lets the reader know, “Here comes new information.” For secondary students, indenting is the first step to organizing your thoughts in a logical manner. Each time a reader sees a new paragraph, s/he knows that the writer is shifting to another thought that supports the thesis statement.
2.	TOPIC SENTENCE (TS) ★	The first sentence in a body paragraph. For literary analysis and personal narrative, the TS includes the subject and the writer’s opinion (commentary) that leads the paragraph. For argumentation, expository/informational, the TS includes the subject of the paragraph, but depending on the assignment, might include something other than a commentary. The TS does the same thing for a body paragraph that the thesis does for the whole essay.
3.	CONCRETE DETAIL (CD) □	Also known as CD, specific details that form the backbone or core of your body paragraphs. Synonyms for concrete details include facts, specific examples, descriptions, illustrations, support, proof, evidence, quotations, paraphrasing, or plot references. A concrete detail is one complete sentence. “What I read,” “What I have seen,” “What I/others have done,” and dialogue.
4.	EMBEDDING QUOTATIONS	When citing from a source, embedding quotations occurs when a writer introduces a quotation with a phrase so that the quotation does not abruptly appear out of nowhere. Usually, this phrase or sentence illustrates what is happening in the scene or article – it sets up the quotation. For advanced writers, the lead-in may be a CD or a CM.
5.	COMMENTARY (CM) ○	Also known as a CM, one commentary equals one sentence. It is your opinion or comment about something, not concrete detail. Synonyms include opinion, insight, analysis, interpretation, inference, personal response, feelings, evaluation, explication, and reflection.
6.	CONCLUDING SENTENCE (CS) ★!	The last sentence in a body paragraph. For literary responses, the CS is all commentary; for expository and summary paragraphs, it depends on the assignment or purpose of the piece and may include concrete detail, such as predictions, connections, inferences, clarifications, and evaluations. Do not repeat key words from the paragraph. Provide a finished feeling.
7.	A CHUNK	It is the smallest unified group of thoughts in a paragraph that combine CDs and CMs. The combination depends on the <i>RATIO</i> for each mode. A paragraph may have multiple “chunks.”
8.	RATIO CD:CM	The <i>RATIO</i> of concrete detail (CD) to commentary (CM). Typically, for literary, style, and rhetorical analyses, the ratio is (1:2+):—1 sentence of concrete detail plus 2 or more sentences of commentary equals one “chunk.” Typically, for argumentation, expository/informational, and narrative, the ratio is (2+:1):—2 or more sentences of concrete detail plus 1 commentary sentence equals one “chunk.” For summary, typically (3+:0).

THE PROCESS OF WRITING AND THE JANE SCHAFER® STEPS IN THAT PROCESS

1.	DECODING THE PROMPT	The first step in the writing process is to know what the prompt is asking you to do. To decode a prompt, determine whether you are being asked to write a short answer, a paragraph, or an essay. From there, identify words in the prompt that guide you to writing the final piece with all the appropriate elements (e.g., thesis, topic sentence, concrete details, and commentary).
2.	PRE-WRITING	Traditional prewriting includes mapping, clustering, bubbling, webbing, brainstorming, free writing, and outlining. The Jane Schaffer method of prewriting includes Gathering CDs, T-charting, the WOW exercise, and the Shaping Sheet.
3.	GATHERING CDS	The Jane Schaffer "Gathering CDs"™ think-sheet helps you to determine what concrete details you will use in each paragraph in response to a writing prompt that your teacher gives you. It also helps you to provide preliminary CMs based on the CDs selected which will also help with your initial topic sentence (TS).
4.	T-CHARTING	The Jane Schaffer "T-Chart"™ is a think-sheet that helps you to begin forming a paragraph with a Topic Sentence, CDs, CMs and a Concluding Sentence.
5.	WEAVING	Jane Schaffer's integral step of blending concrete details and commentary. Once you and your teacher feel confident in your ability to identify and understand CDs and CMs, and you are able to apply the concept/ratio correctly, then you are ready to move beyond the structured format to weaving. Remember - all formal essays reveal the author's voice and style and are organized and logical. They include the introduction, body paragraphs (TS, CDs/CMs, CS), and conclusion.
6.	THE SHAPING SHEET	The Jane Schaffer step performed after prewriting and before the first draft of the essay; this is where you make sure you do the following for each paragraph: 1) include transitions between ideas; 2) vary your sentence openings; 3) include different types of sentences (simple, compound, complex, compound-complex); 4) correct spelling, punctuation, and capitalization errors; and 5) add or delete words, phrases, and sentences to create your voice and your own personal writing style.
7.	PEER RESPONSE	Written responses and reactions to teacher-directed components of your partner's paper. Peer response usually occurs with Shaping Sheets and first drafts.
8.	FIRST DRAFT	The first version of your essay (also called the rough draft) where you combine the introduction, body paragraphs, and conclusion, editing and revising along the way.
9.	FINAL DRAFT	The final version of your essay. At this point, you're ready to submit your essay. By the way, good writers can always make a draft better, but a deadline is a deadline!

The Secret to Raising Smart Kids

Hint: don't tell your kids that they are. More than three decades of research shows that a focus on effort - not on intelligence or ability - is key to success in school and in life.

By Carol S. Dweck

- [1] Our society worships talent, and many people assume that possessing superior intelligence or ability - along with confidence in that ability - is the recipe for success. In fact, however, more than 30 years of scientific investigation suggest that an over emphasis on intellect or talent leaves people **vulnerable** to failure, fearful of challenges and unwilling to remedy their shortcomings.
- [2] The result plays out in children who coast through the early grades under the dangerous notion that no-effort academic achievement defines them as smart or gifted. Such children hold an **implicit** belief that intelligence is **innate** and fixed, making striving to learn seem far less important than being (or looking) smart. This belief also makes them see challenges, mistakes and even the need to exert effort as threats to their **ego** rather than as opportunities to improve. And it causes them to lose confidence and motivation when the work is no longer easy for them.
- [3] Praising children's innate abilities, reinforces this mindset, which can also prevent young athletes or people in the workforce and even marriages from living up to their potential. On the other hand, our studies show that teaching people to have a "growth mindset," which encourages a focus on effort rather than on intelligence or talent, helps make them into high achievers in school and in life.

The Opportunity of Defeat

- [4] I first began to investigate the underpinnings of human motivation - and how people **persevere** after setbacks - as a **psychology** graduate student at Yale University in the 1960s. Animal experiments by psychologist Martin Seligman, Steven Majer and Richard Solomon of the University of Pennsylvania had shown that after repeated failures, most animals conclude that the situation is hopeless and beyond their control. After such an experience, the researchers found, an animal often remains **passive** even when it can affect change - a state they called learned helplessness.

Vocabulary

vulnerable - open to moral attack, criticism, temptation, etc.

implicit - unquestioning or unreserved; absolute.

innate - existing in one from birth; inborn; native.

ego - self esteem or self image; feelings.

persevere - to persist in anything undertaken; maintain a purpose in spite of difficulty, obstacles or discouragement; continue steadfastly.

psychology - the science of human and animal behavior.

NOTES

NOTES

- [5] *People* can learn to be helpless, too, but not everyone reacts to setbacks this way. I wondered: Why do some students give up when they encounter difficulty, whereas others who are no more skilled continue to strive and learn? One answer, I soon discovered, lay in people's beliefs about why they had failed.
- [6] **Two Views of Intelligence**
Several years later I developed a broader theory of what separates the two general classes of learners - helpless versus mastery-oriented. I realized that these different types of students not only explain their failures differently, but they also hold different "theories" of intelligence. The helpless ones believe that intelligence is a fixed trait: you have only a certain amount, and that's that. I call this "fixed mind-set". Mistakes crack their self-confidence because they attribute errors to a lack of ability, which they feel powerless to change. They avoid challenges because challenges make mistakes more likely and looking smart less so. Such children shun effort in the belief that having to work hard means they are dumb.
- [7] The mastery-**oriented** children, on the other hand, think intelligence is **malleable** and can be developed through education and hard work. They want to learn above all else. After all, if you believe that you can expand your intellectual skills, you want to do just that. Because slip ups stem from a lack of effort, not ability, they can be remedied by more effort. Challenges are energizing rather than **intimidating**; they offer opportunities to learn. Students with such a growth **mind-set**, we predicted, were destined for greater academic success and were quite likely to outperform their counterparts.
- [8] We **validated** these expectations in a study published in early 2007. Psychologist Lisa Blackwell of Columbia University and Kali H. Trzesniewski of Stanford University and I monitored 373 students for two years during the transition to junior high school, when the work gets more difficult and the grading more **stringent**, to determine how their mindsets might affect their math grades. At the beginning of seventh grade, we assessed students' mind-sets for asking them to agree or disagree with statements such as "Your intelligence is something very basic about you that you can't really change." We then assessed their beliefs about other aspects of learning and looked to see what happened to their grades.
- [9] As we predicted, the students with a growth mindset felt that learning was a more important goal in school than getting good grades. In addition, they held hard work in high regard, believing that the more you labored at something, the better you would become at it. They understood that even geniuses have to work hard for their great accomplishments. Confronted by a setback such as a disappointing test grade, students with a growth mind-set said they would study harder or try a different strategy for mastering the material.

Vocabulary

passive - not reacting visibly to something that might be expected to produce manifestations of an emotion or feeling.

oriented - to make familiar with or adjusted to facts, principals, or a situation.

malleable - adaptable or traceable.

intimidating - to force into or deter from some action by inducing fear.

validated - to give official sanction, confirmation, or approval to.

stringent - rigorously binding or exacting; strict; severe.

assessed - to determine the value, significance, or extent of; appraise.

T-CHART
(3+:0)

PROMPT: Write a one-chunk paragraph (3+:0) that summarizes the “Two Views of Intelligence” presented in the article “The Secret to Raising Smart Kids.”
For your concluding sentence, explain how this information might affect a student's life..

TOPIC SENTENCE: A recent interesting theory of intelligence says that there are two classes of learners – helpless and mastery-oriented.

CDs	CMs
• helpless – mistakes destroy self-confidence • helpless – avoid challenges • mastery – intelligence can be developed • mastery – challenges energize • mastery – mistakes need more effort	

CONCLUDING SENTENCE: Therefore, a mastery-oriented learner is likely to be much happier in school.

A recent interesting theory of intelligence says that there are two classes of learners: helpless and mastery-oriented. Helpless learners feel that there is nothing they can do about what they perceive as a personal lack of intelligence. They avoid challenges because any mistakes they might make further destroys their confidence. Mastery-oriented learners feel that intelligence can be developed. Challenges energize this type of learner and their response to mistakes is usually that more effort is required. Therefore, a mastery-oriented learner is likely to be much happier in school.

Text-Based

Model

Write a one-chunk expository paragraph (2+:1) that discusses how a dog appears to do calculus.

CLOSE READING QUESTIONS
“It’s a Math World for Animals”
by Emily Sohn

Answer all questions with quotations from the article.

1. What does recent research suggest about the discovery of math?
2. Why might studies of animal mathematicians be important?
3. What did Tim Pennings notice about the way his dog would go after a ball thrown in the water?
4. Why was the dog’s strategy a good one?
5. What test did Pennings run to determine if Elvis had found the fastest way to the ball?
6. What did he discover about where Elvis jumps in the water?
7. How long did it take both the man and the dog to solve the problem?
8. On the basis of his research, what does Pennings suspect?

“It’s a Math World for Animals”

by Emily Sohn

Birds do it. Dogs do it. Even salamanders do it.

The ability to solve math problems is showing up in all sorts of unlikely creatures. From monkeys who know the difference between 2 and 3 to dogs who can calculate the fastest route, animal mathematicians are teaching scientists a few things about numbers.

A growing body of research suggests that nature probably discovered math long before people did. Studies of animal mathematicians might help explain how people learn to add, subtract and multiply and indicate what types of math people can do without going to class. Watching animals solve problems could also make math more fun for people who say they can’t stand the subject.

A FETCHING DOG

Mathematician Tim Pennings, for instance, was at the beach when he discovered that his dog Elvis could do a type of math called calculus.

“I would throw a ball into the water,” Pennings says. “I noticed he’d run along the beach and then jump into the water and swim at an angle toward the ball.”

That’s a good strategy. Swimming is slow compared with running, so swimming all the way to the ball would take longer even if the route is more direct. On the other hand, running along the beach adds to the total distance Elvis must go to get the ball. The best bet is a compromise

between the two – running a certain distance along the beach before plunging into the water.

Pennings wondered if Elvis was instinctively taking the fastest possible route to the ball. First, he measured how fast Elvis runs and swims. Then he threw a tennis ball into the water and let the little Welsh Corgi go.

“I ran after Elvis with a screwdriver,” says Pennings, who works at Hope College in Holland, Michigan. “Where he turned toward the water, I drove a screwdriver into the sand. While he was swimming to the ball, I ran and grabbed a tape measure and beat him to the ball.”

Man and dog ran back and forth like this for more than 3 hours. After throwing out trials with bad tosses or high waves, Pennings had 35 sets of measurements. Then, he went home and did some calculations, using calculus to find the fastest route.

“I did all the math,” Pennings says and I figured out that where Elvis jumps in is pretty much perfect. He kind of naturally knows the right spot to jump in.”

It took the grown man about an hour to come up with the same solution that the 3-year-old dog could figure out in a fraction of a second. But is the dog really doing the math?

“Elvis is doing calculus in the sense that he somehow knows how to find the minimum time to get to the ball,” Pennings says.

Pennings suspects that other creatures have naturally learned the most efficient ways to do things over millions of years of evolution. “There might be all sorts of things like that in nature,” he says.

GATHERING CDS

Prompt: Write a two-chunk (2+:1) paragraph that discusses how a dog appears to do calculus.

1. Think of 4 or more possible concrete details (CDs) that would fit the prompt and write them below.
 2. Circle the 2 for each chunk that fit the assignment best.
 3. Decide the best order and write *CD1* in red next to the first one and *CD2* in red next to the second one for each chunk.
- “research suggests that nature probably discovered math long before people did” (Sohn 91).
 - “run along the beach and then jump into the water and swim at an angle toward the ball” (Sohn 91). - CD1
 - “where Elvis jumps in is pretty much perfect. He kind of naturally knows the right spot to jump in” (Sohn 92) - CD2
 - “took the grown man about an hour to come up with the same solution that the 3 year-old dog could figure out in a fraction of a second” (Sohn 92).
 - “other creatures have naturally learned the most efficient ways to do things over millions of years of evolution” (Sohn 92).

**T-CHART
TEXT-BASED
(2+:1)**

PROMPT: Write a one-chunk paragraph that discusses how a dog appears to do calculus.

TOPIC SENTENCE: **Elvis, the dog, does calculus.**

REVISED TOPIC SENTENCE: **A recent study suggests that dogs may be born with an instinctive understanding of complex math.**

CDs	CMs (This is/was important because)... Why?
1st CD: Lead-in: Seeking to retrieve a ball thrown by his master, Elvis, a Corgi, would Quotation: “run along the beach and then jump into the water and swim at an angle toward the ball” (Sohn 91). 2nd CD: Lead-in: Solving a problem that would take a long time for a human to work out, Quotation: “where Elvis jumps in is pretty much perfect. He kind of naturally knows the right spot to jump in” (Sohn 92).	instinctively doing a calculus problem found the most efficient way He is trying to retrieve the ball the best way. seemed to know that balance was most effective dog born with mathematical instinct It was a hard problem for humans to work out. doing complicated math with no training

COMMENTARY SENTENCE: **Elvis seems to know that a balance between running along the beach and swimming in the water was the most effective way to retrieve the ball.**

CONCLUDING SENTENCE: **The study indicates that complicated math occurs all around us in everyday life.**

**(2+:1)****THE SHAPING SHEET****TS**

A recent study suggests that dogs may be born with an instinctive understanding of complex math.

**2 OR
MORE
CDS**

Seeking to retrieve a ball thrown by his master, Elvis, a Corgi, would “run along the beach and then jump into the water and swim at an angle toward the ball.” (Sohn 91).

Solving a problem might take some time for a human to work out, “for Elvis, however, where he jumps in is pretty much perfect. He kind of naturally knows the right spot to jump in” (Sohn 92).

CM

Elvis seemed to know that a balance between running along the beach and swimming in the water was the more effective way to retrieve the ball.

CS

The study indicates that complicated math occurs all around us in everyday life.
